1 SiSU - MANUAL, RALPH AMISSAH

2 WHAT IS SiSU?

1. Introduction - What is SiSU?

3 SiSU is a system for document markup, publishing (in multiple open
4 standard formats) and search

5 SiSU¹ is a² framework for document structuring, publishing and search,
comprising of (a) a lightweight document structure and presentation
markup syntax and (b) an accompanying engine for generating standard
document format outputs from documents prepared in sisu markup
syntax, which is able to produce multiple standard outputs that (can)
share a common numbering system for the citation of text within a
document.

6 SiSU is developed under an open source, software libre license (GPL3).
It has been developed in the context of coping with large document sets
with evolving markup related technologies, for which you want multiple
output formats, a common mechanism for cross-output-format citation,
and search.

7 SiSU both defines a markup syntax and provides an engine that produces open standards format outputs from documents prepared with SiSU markup. From a single lightly prepared document sisu custom builds several standard output formats which share a common (text object) numbering system for citation of content within a document (that also has implications for search). The sisu engine works with an abstraction of the document's structure and content from which it is possible to generate different forms of representation of the document. Significantly SiSU markup is more sparse than html and outputs which include html, LaTeX, landscape and portrait pdfs, Open Document Format (ODF), all of which can be added to and updated. SiSU is also able to populate SQL type databases at an object level, which means that searches can be made with that degree of granularity. Results of objects (primarily paragraphs and

¹ “SiSU information Structuring Universe” or “Structured information, Serialized Units”.
also chosen for the meaning of the Finnish term “sisu”.

² Unix command line oriented

headings) can be viewed directly in the database, or just the object numbers shown - your search criteria is met in these documents and at these locations within each document.

Source document preparation and output generation is a two step process: (i) document source is prepared, that is, marked up in sisu markup syntax and (ii) the desired output subsequently generated by running the sisu engine against document source. Output representations if updated (in the sisu engine) can be generated by re-running the engine against the prepared source. Using **SiSU** markup applied to a document, **SiSU** custom builds various standard open output formats including plain text, HTML, XHTML, XML, OpenDocument, LaTeX or PDF files, and populate an SQL database with objects³ (equating generally to paragraph-sized chunks) so searches may be performed and matches returned with that degree of granularity (e.g. your search criteria is met by these documents and at these locations within each document). Document output formats share a common object numbering system for locating content. This is particularly suitable for “published” works (finalized texts as opposed to works that are frequently changed or updated) for which it provides a fixed means of reference of content.

In preparing a **SiSU** document you optionally provide semantic information related to the document in a document header, and in marking up the substantive text provide information on the structure of the document, primarily indicating heading levels and footnotes. You also provide information on basic text attributes where used. The rest is automatic, sisu from this information custom builds⁴ the different forms of output requested.

SiSU works with an abstraction of the document based on its structure

³ objects include: headings, paragraphs, verse, tables, images, but not footnotes/endnotes which are numbered separately and tied to the object from which they are referenced.

⁴ i.e. the html, pdf, odf outputs are each built individually and optimised for that form of presentation, rather than for example the html being a saved version of the odf, or the pdf being a saved version of the html.

which is comprised of its frame⁵ and the objects⁶ it contains, which enables **SiSU** to represent the document in many different ways, and to take advantage of the strengths of different ways of presenting documents. The objects are numbered, and these numbers can be used to provide a common base for citing material within a document across the different output format types. This is significant as page numbers are not suited to the digital age, in web publishing, changing a browser’s default font or using a different browser means that text appears on different pages; and in publishing in different formats, html, landscape and portrait pdf etc. again page numbers are of no use to cite text in a manner that is relevant against the different output types. Dealing with documents at an object level together with object numbering also has implications for search.

One of the challenges of maintaining documents is to keep them in a format that would allow users to use them without depending on a proprietary software popular at the time. Consider the ease of dealing with legacy proprietary formats today and what guarantee you have that old proprietary formats will remain (or can be read without proprietary software/equipment) in 15 years time, or the way the way in which html has evolved over its relatively short span of existence. **SiSU** provides the flexibility of outputting documents in multiple non-proprietary open formats including html, pdf⁷ and the ISO standard ODF.⁸ Whilst **SiSU** relies on software, the markup is uncomplicated and minimalistic which guarantees that future engines can be written to run against it. It is also easily converted to other formats, which means documents prepared in **SiSU** can be migrated to other document formats. Further security is provided by the fact that the software itself, **SiSU** is available under GPL3 a licence that guarantees that the source code will always be open, and free as in libre which means that that code base can be used updated and further

⁵ the different heading levels

⁶ units of text, primarily paragraphs and headings, also any tables, poems, code-blocks

⁷ Specification submitted by Adobe to ISO to become a full open ISO specification
[<http://www.linux-watch.com/news/NS7542722606.html>](http://www.linux-watch.com/news/NS7542722606.html)

⁸ ISO/IEC 26300:2006

developed as required under the terms of its license. Another challenge is to keep up with a moving target. **SiSU** permits new forms of output to be added as they become important, (Open Document Format text was added in 2006), and existing output to be updated (html has evolved and the related module has been updated repeatedly over the years, presumably when the World Wide Web Consortium (w3c) finalises html 5 which is currently under development, the html module will again be updated allowing all existing documents to be regenerated as html 5).

¹² The document formats are written to the file-system and available for indexing by independent indexing tools, whether off the web like Google and Yahoo or on the site like Lucene and Hyperestraier.

¹³ **SiSU** also provides other features such as concordance files and document content certificates, and the working against an abstraction of document structure has further possibilities for the research and development of other document representations, the availability of objects is useful for example for topic maps and the commercial law thesaurus by Vikki Rogers and Al Krtizer, together with the flexibility of **SiSU** offers great possibilities.

¹⁴ **SiSU** is primarily for published works, which can take advantage of the citation system to reliably reference its documents. **SiSU** works well in a complementary manner with such collaborative technologies as Wikis, which can take advantage of and be used to discuss the substance of content prepared in **SiSU**.

¹⁵ <<http://www.jus.uio.no/sisu>>

2. How does sisu work?

¹⁶ **SiSU** markup is fairly minimalistic, it consists of: a (largely optional) document header, made up of information about the document (such as when it was published, who authored it, and granting what rights) and any processing instructions; and markup within the substantive text of the document, which is related to document structure and typeface. **SiSU** must be able to discern the structure of a document, (text headings and their levels in relation to each other), either from information provided in the document header or from markup within the text (or from a combination of both). Processing is done against an abstraction of the document comprising of information on the document's structure and its objects,[2] which the program serializes (providing the object numbers) and which are assigned hash sum values based on their content. This abstraction of information about document structure, objects, (and hash sums), provides considerable flexibility in representing documents different ways and for different purposes (e.g. search, document layout, publishing, content certification, concordance etc.), and makes it possible to take advantage of some of the strengths of established ways of representing documents, (or indeed to create new ones).

¹⁷

18

3. Summary of features

19

- sparse/minimal markup (clean utf-8 source texts). Documents are prepared in a single UTF-8 file using a minimalistic mnemonic syntax. Typical literature, documents like “War and Peace” require almost no markup, and most of the headers are optional.

20

- markup is easily readable/parsable by the human eye, (basic markup is simpler and more sparse than the most basic HTML), [this may also be converted to XML representations of the same input/source document].

21

- markup defines document structure (this may be done once in a header pattern-match description, or for heading levels individually); basic text attributes (bold, italics, underscore, strike-through etc.) as required; and semantic information related to the document (header information, extended beyond the Dublin core and easily further extended as required); the headers may also contain processing instructions. SiSU markup is primarily an abstraction of document structure and document metadata to permit taking advantage of the basic strengths of existing alternative practical standard ways of representing documents [be that browser viewing, paper publication, sql search etc.] (html, xml, odf, latex, pdf, sql)

22

- for output produces reasonably elegant output of established industry and institutionally accepted open standard formats.[3] takes advantage of the different strengths of various standard formats for representing documents, amongst the output formats currently supported are:

23

- html - both as a single scrollable text and a segmented document
- xhtml
- XML - both in sax and dom style xml structures for further development as required
- ODF - open document format, the iso standard for document storage

24

- LaTeX - used to generate pdf

25

- pdf (via LaTeX)

26

- sql - population of an sql database, (at the same object level that is used to cite text within a document)

27

28

29

30

31

32

33

Also produces: concordance files; document content certificates (md5 or sha256 digests of headings, paragraphs, images etc.) and html manifests (and sitemaps of content). (b) takes advantage of the strengths implicit in these very different output types, (e.g. PDFs produced using typesetting of LaTeX, databases populated with documents at an individual object/paragraph level, making possible granular search (and related possibilities))

- ensuring content can be cited in a meaningful way regardless of selected output format. Online publishing (and publishing in multiple document formats) lacks a useful way of citing text internally within documents (important to academics generally and to lawyers) as page numbers are meaningless across browsers and formats. sisu seeks to provide a common way of pinpoint the text within a document, (which can be utilized for citation and by search engines). The outputs share a common numbering system that is meaningful (to man and machine) across all digital outputs whether paper, screen, or database oriented, (pdf, HTML, xml, sqlite, postgresql), this numbering system can be used to reference content.

- Granular search within documents. SQL databases are populated at an object level (roughly headings, paragraphs, verse, tables) and become searchable with that degree of granularity, the output information provides the object/paragraph numbers which are relevant across all generated outputs; it is also possible to look at just the matching paragraphs of the documents in the database; [output indexing also work well with search indexing tools like hyperestraier].

- long term maintainability of document collections in a world of changing formats, having a very sparsely marked-up source document base.

there is a considerable degree of future-proofing, output representations are “upgradeable”, and new document formats may be added. e.g. addition of odf (open document text) module in 2006 and in future html5 output sometime in future, without modification of existing prepared texts

- 34 • SQL search aside, documents are generated as required and static once generated.

35 • documents produced are static files, and may be batch processed, this needs to be done only once but may be repeated for various reasons as desired (updated content, addition of new output formats, updated technology document presentations/representations)

36 • document source (plaintext utf-8) if shared on the net may be used as input and processed locally to produce the different document outputs

37 • document source may be bundled together (automatically) with associated documents (multiple language versions or master document with inclusions) and images and sent as a zip file called a sisupod, if shared on the net these too may be processed locally to produce the desired document outputs

38 • generated document outputs may automatically be posted to remote sites.

39 • for basic document generation, the only software dependency is **Ruby**, and a few standard Unix tools (this covers plaintext, HTML, XML, ODF, LaTeX). To use a database you of course need that, and to convert the LaTeX generated to pdf, a latex processor like tetex or texlive.

40 • as a developers tool it is flexible and extensible

41 Syntax highlighting for **SiSU** markup is available for a number of text editors.

42 **SiSU** is less about document layout than about finding a way with lit-

tle markup to be able to construct an abstract representation of a document that makes it possible to produce multiple representations of it which may be rather different from each other and used for different purposes, whether layout and publishing, or search of content

43 i.e. to be able to take advantage from this minimal preparation starting point of some of the strengths of rather different established ways of representing documents for different purposes, whether for search (relational database, or indexed flat files generated for that purpose whether of complete documents, or say of files made up of objects), online viewing (e.g. html, xml, pdf), or paper publication (e.g. pdf)...

44 the solution arrived at is by extracting structural information about the document (about headings within the document) and by tracking objects (which are serialized and also given hash values) in the manner described. It makes possible representations that are quite different from those offered at present. For example objects could be saved individually and identified by their hashes, with an index of how the objects relate to each other to form a document.

45 4. Help

46 4.1 SiSU Manual

47 The most up to date information on sisu should be contained in the
sisu_manual, available at:

48 <http://www.jus.uio.no/sisu/sisu_manual/>

49 and (from **SiSU** 0.59 onwards) installed locally at:

50 /usr/share/doc/sisu/sisu_manual/

51 or equivalent directory

52 Within the **SiSU** tarball at:

53 ./data/doc/sisu/sisu_manual/

54 4.2 SiSU man pages

55 If **SiSU** is installed on your system usual man commands should be available, try:

56 man sisu

57 man sisu_markup

58 man sisu_commands

59 Most **SiSU** man pages are generated directly from sisu documents that are used to prepare the sisu manual, the sources files for which are located within the **SiSU** tarball at:

60 ./data/doc/sisu/sisu_manual/

61 Once installed, directory equivalent to:

62 /usr/share/doc/sisu/sisu_manual/

Available man pages are converted back to html using man2html:

63 /usr/share/doc/sisu/html/

64 ./data/doc/sisu/html/

65 The **SiSU** man pages can be viewed online at:⁹

66 An online version of the sisu man page is available here:

67 • various sisu man pages¹⁰

68 • sisu.1¹¹

69 • sisu.8¹²

70 • sisu_examples.1¹³

71 • sisu_webrick.1¹⁴

72 4.3 SiSU built-in interactive help

73 This is particularly useful when current installation information is obtained as the interactive help is able to provide information on your sisu configuration and setup.

74 sisu –help

75 sisu –help [subject]

⁹ generated from source using rman

<<http://polyglotman.sourceforge.net/rman.html>>

With regard to **SiSU** man pages the formatting generated for markup syntax is not quite right, for that you might prefer the links under:

<<http://www.jus.uio.no/sample>>

¹⁰ <<http://www.jus.uio.no/sisu/man/>>

¹¹ <<http://www.jus.uio.no/sisu/man/sisu.1.html>>

¹² <<http://www.jus.uio.no/sisu/man/sisu.8.html>>

¹³ <http://www.jus.uio.no/sisu/man/sisu_examples.1.html>

¹⁴ <http://www.jus.uio.no/sisu/man/sisu_webrick.1.html>

77 sisu –help env [for feedback on the way your system is setup
with regard to sisu]

78 sisu -V [same as above command]

79 sisu –help commands

80 sisu –help markup

81 Apart from real-time information on your current configuration the
SiSU manual and man pages are likely to contain more up-to-date
information than the sisu interactive help (for example on commands and
markup).

82 NOTE: Running the command sisu (alone without any flags, filenames or
wildcards) brings up the interactive help, as does any sisu command that
is not recognised. Enter to escape.

83 4.4 Help Sources

84 For lists of alternative help sources, see:

85 man page

93 5. Commands Summary

94 5.1 Synopsis

95 **SiSU** - Structured information, Serialized Units - a document publishing
system

96 sisu [-abcDdFHhIiMmNnopqRrSsTtUuVvwXxYyZz0-9] [filename/
wildcard]

97 sisu [-Ddcv] [instruction]

98 sisu [-CcFLSVvW]

99 Note: commands should be issued from within the directory that contains
the marked up files, cd to markup directory.

100 5.2 Description

101 **SiSU SiSU** is a document publishing system, that from a simple single
marked-up document, produces multiple of output formats including:
plaintext, html, LaTeX, pdf, xhtml, XML, info, and SQL (PostgreSQL
and SQLite), which share numbered text objects (“object citation num-
bering”) and the same document structure information. For more see:
<<http://www.jus.uio.no/sisu>>

102 5.3 Document Processing Command Flags

103 -a [filename/wildcard]

produces plaintext with Unix linefeeds and without markup, (object num-
bers are omitted), has footnotes at end of each paragraph that contains
them [-A for equivalent dos (linefeed) output file] [see -e for endnotes].
(Options include: –endnotes for endnotes –footnotes for footnotes at the

end of each paragraph –unix for unix linefeed (default) –msdos for msdos linefeed)

-b [filename/wildcard]

produces xhtml/XML output for browser viewing (sax parsing).

-C [-init-site]

configure/initialise shared output directory files initialize shared output directory (config files such as css and dtd files are not updated if they already exist unless modifier is used). -C –init-site configure/initialise site more extensive than -C on its own, shared output directory files/force update, existing shared output config files such as css and dtd files are updated if this modifier is used.

-CC

configure/initialise shared output directory files initialize shared output directory (config files such as css and dtd files are not updated if they already exist unless modifier is used). The equivalent of: -C –init-site configure/initialise site, more extensive than -C on its own, shared output directory files/force update, existing shared output config files such as css and dtd files are updated if -CC is used.

-c [filename/wildcard]

screen toggle ansi screen colour on or off depending on default set (unless -c flag is used: if sisurc colour default is set to ‘true’, output to screen will be with colour, if sisurc colour default is set to ‘false’ or is undefined screen output will be without colour).

-D [instruction] [filename]

database postgresql (–pgsql may be used instead) possible instructions, include: –createdb; –create; –dropall; –import [filename]; –update [filename]; –remove [filename]; see database section below.

-d [-db-[database type (sqlite|pg)]] –[instruction] [filename]

database type default set to sqlite, (for which –sqlite may be used instead) or to specify another database –db-[pgsql, sqlite] (however see -

D) possible instructions include: –createdb; –create; –dropall; –import [filename]; –update [filename]; –remove [filename]; see database section below.

-F [-webserv=webrick]

generate examples of (naive) cgi search form for sqlite and pgsql depends on your already having used sisu to populate an sqlite and/or pgsql database, (the sqlite version scans the output directories for existing sisu_sqlite databases, so it is first necessary to create them, before generating the search form) see -d -D and the database section below. If the optional parameter –webserv=webrick is passed, the cgi examples created will be set up to use the default port set for use by the webrick server, (otherwise the port is left blank and the system setting used, usually 80). The samples are dumped in the present work directory which must be writable, (with screen instructions given that they be copied to the cgi-bin directory). -Fv (in addition to the above) provides some information on setting up hyperestraier for sisu

-H [filename/wildcard]

produces html without link suffixes (.html .pdf etc.) (“Hide”). Requires an appropriately configured web server. [behaviour switched after 0.35 see -h].

-h [filename/wildcard]

produces html (with hardlinks i.e. with name suffixes in links/local urls). html, with internal document links that include the document suffix, i.e. whether it is .html or .pdf (required for browsing directly off a file system, and works with most web servers). [behaviour switched after 0.35 see -H].

-I [filename/wildcard]

produces texinfo and info file, (view with pinfo).

-L

prints license information.

115

-M [filename/wildcard/url]

maintenance mode files created for processing preserved and their locations indicated. (also see -V)

116

-m [filename/wildcard/url]

assumed for most other flags, creates new meta-markup file, (the metaverse) that is used in all subsequent processing of other output. This step is assumed for most processing flags. To skip it see -n

117

-N [filename/wildcard/url]

document digest or document content certificate (DCC) as md5 digest tree of the document: the digest for the document, and digests for each object contained within the document (together with information on software versions that produced it) (digest.txt). -NV for verbose digest output to screen.

118

-n [filename/wildcard/url]

skip meta-markup (building of “metaverse”), this skips the equivalent of -m which is otherwise assumed by most processing flags.

119

-o [filename/wildcard/url]

output basic document in opendocument file format (opendocument.odt).

120

-p [filename/wildcard]

produces LaTeX pdf (portrait.pdf and landscape.pdf). Default paper size is set in config file, or document header, or provided with additional command line parameter, e.g. --papersize-a4 preset sizes include: ‘A4’, U.S. ‘letter’ and ‘legal’ and book sizes ‘A5’ and ‘B5’ (system defaults to A4).

121

-q [filename/wildcard]

quiet less output to screen.

122

-R [filename/wildcard]

copies sisu output files to remote host using rsync. This requires that

sisurc.yml has been provided with information on hostname and username, and that you have your “keys” and ssh agent in place. Note the behavior of rsync different if -R is used with other flags from if used alone. Alone the rsync –delete parameter is sent, useful for cleaning the remote directory (when -R is used together with other flags, it is not). Also see -r

-r [filename/wildcard]

123 copies sisu output files to remote host using scp. This requires that sisurc.yml has been provided with information on hostname and username, and that you have your “keys” and ssh agent in place. Also see -R

-S

124 produces a sisupod a zipped sisu directory of markup files including sisu markup source files and the directories local configuration file, images and skins. Note: this only includes the configuration files or skins contained in ./sisu not those in ~/.sisu -S [filename/wildcard] option. Note: (this option is tested only with zsh).

-S [filename/wildcard]

125 produces a zipped file of the prepared document specified along with associated images, by default named sisupod.zip they may alternatively be named with the filename extension .ssp This provides a quick way of gathering the relevant parts of a sisu document which can then for example be emailed. A sisupod includes sisu markup source file, (along with associated documents if a master file, or available in multilingual versions), together with related images and skin. SiSU commands can be run directly against a sisupod contained in a local directory, or provided as a url on a remote site. As there is a security issue with skins provided by other users, they are not applied unless the flag –trust or –trusted is added to the command instruction, it is recommended that file that are not your own are treated as untrusted. The directory structure of the unzipped file is understood by sisu, and sisu commands can be run within it. Note: if

you wish to send multiple files, it quickly becomes more space efficient to zip the sisu markup directory, rather than the individual files for sending). See the -S option without [filename/wildcard].

-s [filename/wildcard]

copies sisu markup file to output directory.

-t [filename/wildcard (*.termsheet.rb)]

standard form document builder, preprocessing feature

-U [filename/wildcard]

prints url output list/map for the available processing flags options and resulting files that could be requested, (can be used to get a list of processing options in relation to a file, together with information on the output that would be produced), -u provides url output mapping for those flags requested for processing. The default assumes sisu_webrick is running and provides webrick url mappings where appropriate, but these can be switched to file system paths in sisurc.yml

-u [filename/wildcard]

provides url mapping of output files for the flags requested for processing, also see -U

-V

on its own, provides SiSU version and environment information (sisu – help env)

-V [filename/wildcard]

even more verbose than the -v flag. (also see -M)

-v

on its own, provides SiSU version information

-v [filename/wildcard]

provides verbose output of what is being built, where it is being built (and error messages if any), as with -u flag provides a url mapping of files created for each of the processing flag requests. See also -V

-W

starts ruby's webrick webserver points at sisu output directories, the default port is set to 8081 and can be changed in the resource configuration files. [tip: the webrick server requires link suffixes, so html output should be created using the -h option rather than -H; also, note -F webrick].

-w [filename/wildcard]

produces concordance (wordmap) a rudimentary index of all the words in a document. (Concordance files are not generated for documents of over 260,000 words unless this limit is increased in the file sisurc.yml)

-X [filename/wildcard]

produces XML output with deep document structure, in the nature of dom.

-x [filename/wildcard]

produces XML output shallow structure (sax parsing).

-Y [filename/wildcard]

produces a short sitemap entry for the document, based on html output and the sisu_manifest. –sitemaps generates/updates the sitemap index of existing sitemaps. (Experimental, [g,y,m announcement this week])

-y [filename/wildcard]

produces an html summary of output generated (hyperlinked to content) and document specific metadata (sisu_manifest.html). This step is assumed for most processing flags.

-Z [filename/wildcard]

Zap, if used with other processing flags deletes output files of the type about to be processed, prior to processing. If -Z is used as the lone processing related flag (or in conjunction with a combination of -[mMvVq]), will remove the related document output directory.

-z [filename/wildcard]

produces php (zend) [this feature is disabled for the time being]

142

6. command line modifiers

-no-ocn

with -h -H or -p

switches off object citation numbering. Produce output without identifying numbers in margins of html or LaTeX/pdf output.

143

-no-annotate

strips output text of editor endnotes^{*1} denoted by asterisk or dagger/plus sign

144

-no-asterisk

strips output text of editor endnotes^{*2} denoted by asterisk sign

145

-no-dagger

strips output text of editor endnotes⁺¹ denoted by dagger/plus sign

147

7. database commands

dbi - database interface

148

-D or -pgsql set for postgresql -d or -sqlite default set for sqlite -d is modifiable with -db=[database type (pgsql or sqlite)]

149

-Dv –createall

initial step, creates required relations (tables, indexes) in existing postgresql database (a database should be created manually and given the same name as working directory, as requested) (rb.dbi) [-dv –createall sqlite equivalent] it may be necessary to run sisu -Dv –createdb initially NOTE: at the present time for postgresql it may be necessary to manually create the database. The command would be ‘createdb [database name]’ where database name would be SiSU_[present working directory name (without path)]. Please use only alphanumerics and underscores.

150

-Dv –import

151

filename/wildcard

imports data specified to postgresql db (rb.dbi) [-dv –import sqlite equivalent]

152

-Dv –update

filename/wildcard

updates/imports specified data to postgresql db (rb.dbi) [-dv –update sqlite equivalent]

153

-D –remove

filename/wildcard

removes specified data to postgresql db (rb.dbi) [-d –remove sqlite equivalent]

154

-D –dropall

kills data” and drops (postgresql or sqlite) db, tables and indexes [-d –dropall sqlite equivalent]

^{*1} square brackets

^{*2} square brackets

⁺¹ square brackets

155

The v in e.g. -Dv is for verbose output.

8. Shortcuts, Shorthand for multiple flags

156

-update [filename/wildcard]

157

Checks existing file output and runs the flags required to update this output. This means that if only html and pdf output was requested on previous runs, only the -hp files will be applied, and only these will be generated this time, together with the summary. This can be very convenient, if you offer different outputs of different files, and just want to do the same again.

-0 to -5 [filename or wildcard]

158

Default shorthand mappings (note that the defaults can be changed/configured in the sisurc.yml file):

-0

159

-mNhwpAobxXyYv [this is the default action run when no options are given, i.e. on ‘sisu [filename]’]

-1

160

-mNHwpy

-2

161

-mNHwpaoy

-3

162

-mNhwpAobxXyY

-4

163

-mNhwpAobxXDyY –import

-5

164

-mNhwpAobxXDyY –update

add -v for verbose mode and -c for color, e.g. sisu -2vc [filename or wildcard]

165

consider -u for appended url info or -v for verbose output

166

167 8.0.1 Command Line with Flags - Batch Processing

168 In the data directory run sisu -mh filename or wildcard eg. “sisu -h cisg.sst” or “sisu -h *.{sst,ssm}” to produce html version of all documents.

169 Running sisu (alone without any flags, filenames or wildcards) brings up the interactive help, as does any sisu command that is not recognised. Enter to escape.

170 9. Introduction to SiSU Markup¹⁵

171 9.1 Summary

172 SiSU source documents are plaintext (UTF-8)¹⁶ files

173 All paragraphs are separated by an empty line.

174 Markup is comprised of:

- 175 • at the top of a document, the document header made up of semantic meta-data about the document and if desired additional processing instructions (such an instruction to automatically number headings from a particular level down)

- 176 • followed by the prepared substantive text of which the most important single characteristic is the markup of different heading levels, which define the primary outline of the document structure. Markup of substantive text includes:

- 177 • heading levels defines document structure
- 178 • text basic attributes, italics, bold etc.
- 179 • grouped text (objects), which are to be treated differently, such as code blocks or poems.
- 180 • footnotes/endnotes
- 181 • linked text and images
- 182 • paragraph actions, such as indent, bulleted, numbered-lists, etc.

183 Some interactive help on markup is available, by typing sisu and selecting markup or sisu –help markup

¹⁵ From sometime after SiSU 0.58 it should be possible to describe SiSU markup using SiSU, which though not an original design goal is useful.

¹⁶ files should be prepared using UTF-8 character encoding

184

9.2 Markup Examples

9.2.1 Online

Online markup examples are available together with the respective outputs produced from <<http://www.jus.uio.no/sisu/SiSU/2.html>> or from <http://www.jus.uio.no/sisu/sisu_examples/>

There is of course this document, which provides a cursory overview of sisu markup and the respective output produced: <http://www.jus.uio.no/sisu/sisu_markup/>

Some example marked up files are available as html with syntax highlighting for viewing: <<http://www.jus.uio.no/sisu/sample/syntax>>

an alternative presentation of markup syntax: <http://www.jus.uio.no/sisu/sample/on_markup.txt>

9.2.2 Installed

With SiSU installed sample skins may be found in: /usr/share/doc/sisu/sisu_markup_samples (or equivalent directory) and if sisu-markup-samples is installed also under: /usr/share/doc/sisu/sisu_markup_samples/non-free

10. Markup of Headers

Headers consist of semantic meta-data about a document, which can be used by any output module of the program; and may in addition include extra processing instructions.

Note: the first line of a document may include information on the markup version used in the form of a comment. Comments are a percentage mark at the start of a paragraph (and as the first character in a line of text) followed by a space and the comment:

% this would be a comment

10.1 Sample Header

This current document has a header similar to this one (without the comments):

```
% SiSU 0.57
@title: SiSU
@subtitle: Markup
@samples/samples/dfrgissah
@rights: Copyright (C) Ralph Amissah 2007, part of SiSU documentation, License GPL 3
@type: information
@subject: ebook, epublishing, electronic book, electronic publishing, electronic document, electronic citation, data structure, citation systems, search
@date.created: 2002-08-28
@date.issued: 2002-08-28
@date.available: 2002-08-28
@date.modified: 2007-09-16
@date: 2007-09-16
@level: new=C; break=1; num_top=1
% comment: in this @level header num_top=1 starts automatic heading numbering at heading level 1 (numbering continues 3 levels down); the new and break instructions are used by the LaTeX/pdf and odf output to determine where to put page breaks (that are not used by html output or say sql database population).
@skin: skin_sisu_manual
% skins modify the appearance of a document and are placed in a sub-directory under ./sisu/skin ~/sisu/skin or /etc/sisu/skin. A skin may affect single documents that request them, all documents in a directory, or be site-wide. (A document is affected by a single skin)
@bold: /Gnu|Debian|Ruby|SiSU/
```

192

193

194

195

10.2 Available Headers

200 Header tags appear at the beginning of a document and provide meta information on the document (such as the Dublin Core), or information as to how the document as a whole is to be processed. All header instructions take either the form @headername: or 0^ headername. All Dublin Core meta tags are available

201 **@identifier:** information or instructions

202 where the “identifier” is a tag recognised by the program, and the “information” or “instructions” belong to the tag/identifier specified

203 Note: a header where used should only be used once; all headers apart from @title: are optional; the @structure: header is used to describe document structure, and can be useful to know.

204 This is a sample header

205 **% SiSU 0.38** [declared file-type identifier with markup version]

206 **@title:** [title text] This is the title of the document and used as such, this header is the only one that is mandatory

207 **@subtitle:** The Subtitle if any

208 **@creator:** [or @author:] Name of Author

209 **@subject:** (whatever your subject)

210 **@description:**

211	@publisher:	212
	@contributor:	
	@translator: [or @translated_by:]	213
	@illustrator: [or @illustrated_by:]	214
	@prepared_by: [or @digitized_by:]	215
	@date: 2000-08-27 [also @date.created: @date.issued:]	216
	@date.available: @date.valid: @date.modified:]	
	@type: article	217
	@format:	218
	@identifier:	219
	@source:	220
	@language: [or @language.document:] [country code for language if available, or language, English, en is the default setting] (en - English, fr - French, de - German, it - Italian, es - Spanish, pt - Portuguese, sv - Swedish, da - Danish, fi - Finnish, no - Norwegian, is - Icelandic, nl - Dutch, et - Estonian, hu - Hungarian, pl - Polish, ro - Romanian, ru - Russian, el - Greek, uk - Ukrainian, tr - Turkish, sk - Slovak, sl - Slovenian, hr - Croatian, cs - Czech, bg - Bulgarian) [however, encodings are not available for all of the languages listed.]	221
	[@language.original: original language in which the work was published]	222
	@papersize: (A4 US_letter book_B5 book_A5 US_legal)	223
	@relation:	224
	@coverage:	225
	@rights: Copyright (c) Name of Right Holder, all rights reserved, or as granted: public domain, copyleft, creative commons variant, etc.	226
	@owner:	227

@keywords: text document generation processing management latex pdf structured xml citation [your keywords here, used for example by rss feeds, and in sql searches]

@abstract: [paper abstract, placed after table of contents]

@comment: [...]

@catalogue: loc=[Library of Congress classification]; dewey=[Dewey classification]; isbn=[ISBN]; pg=[Project Gutenberg text number]

@classify_loc: [Library of Congress classification]

@classify_dewey: [Dewey classification]

@classify_isbn: [ISBN]

@classify_pg: [Project Gutenberg text number]

@prefix: [prefix is placed just after table of contents]

@prefix_a: [prefix is placed just before table of contents - not implemented]

@prefix_b:

@rcs: \$Id: sisu_markup.sst,v 1.2 2007/09/08 17:12:47 ralph Exp \$ [used by rcs or cvs to embed version (revision control) information into document, rcs or cvs can usefully provide a history of updates to a document]

@structure: PART; CHAPTER; SECTION; ARTICLE; none; none; optional, document structure can be defined by words to match or regular expression (the regular expression is assumed to start at the beginning of a line of text i.e. *defaultmarkers*: *A* to : *C* and *l1to6* can be used with *intext* instead, without this header tag, and maybe used to supplement the instructions provided in this header tag if provided (@structure : is)

@level: newpage=3; breakpage=4

paragraph level, used by latex to breakpages, the page is optional eg. in newpage

@markup: information on the markup used, e.g. new=1,2,3; break=4; num_top=4 [or newpage=1,2,3; breakpage=4; num_top=4] newpage and breakpage, heading level, used by LaTeX to breakpages. breakpage: starts on a new page in single column text and on a new column in double column text; newpage: starts on a new page for both single and double column texts.

num_top=4 [auto-number document, starting at level 4. the default is to provide 3 levels, as in 1 level 4, 1.1 level 5, 1.1.1 level 6, markup to be merged within level]

num_extract [take numbering of headings provided (manually in marked up source document), and use for numbering of segments. Available where a clear numbering structure is provided within document, without the repetition of a number in a header.] [In 0.38 notation, you would map to the equivalent levels, the examples provided would map to the following new=A,B,C; break=1; num_top=1 [or newpage=A,B,C; breakpage=1; num_top=1] see headings]

@bold: [regular expression of words/phrases to be made bold]

@italics: [regular expression of words/phrases to italicise]

@vocabulary: name of taxonomy/vocabulary/wordlist to use against document

@skin: skin_doc_[name_of_desired_document_skin]

skins change default settings related to the appearance of documents generated, such as the urls of the home site, and the icon/logo for the document or site.

@links: { SiSU }<http://www.jus.uio.no/sisu/>;

{ FSF }<http://www.fsf.org>

A to : C and l1to6 can be used with intext instead, without this header tag, and maybe used to supplement the instructions provided in this header tag if provided (@structure : is)

@promo: sisu, ruby, search_libre_docs, open_society

places content in right pane in html, makes use of list.yml and promo.yml, commented out sample in document sample: free_as_in_freedom.richard_stallman_crusade_for_free_software.sam_williams.sst

249

11. Markup of Substantive Text

250

11.1 Heading Levels

251

Heading levels are :A~, :B~, :C~, 1~, 2~, 3~ ... :A - :C being part / section headings, followed by other heading levels, and 1 -6 being headings followed by substantive text or sub-headings. :A~ usually the title :A~ ? conditional level 1 heading (used where a stand-alone document may be imported into another)

252

:A~ [heading text] Top level heading [this usually has similar content to the title @title:] NOTE: the heading levels described here are in 0.38 notation, see heading

253

:B~ [heading text] Second level heading [this is a heading level divider]

254

:C~ [heading text] Third level heading [this is a heading level divider]

255

1~ [heading text] Top level heading preceding substantive text of document or sub-heading 2, the heading level that would normally be marked 1. or 2. or 3. etc. in a document, and the level on which sisu by default would break html output into named segments, names are provided automatically if none are given (a number), otherwise takes the form 1~my_filename_for_this_segment

256

2~ [heading text] Second level heading preceding substantive text of document or sub-heading 3, the heading level that would normally be marked 1.1 or 1.2 or 1.3 or 2.1 etc. in a document.

257

3~ [heading text] Third level heading preceding substantive text of document, that would normally be marked 1.1.1 or 1.1.2 or 1.2.1 or 2.1.1 etc. in a document

1~ filename level 1 heading,

% the primary division such as Chapter that is followed by substantive text, and may be further subdivided (this is the level on which by default html segments are made)

11.2 Font Attributes

259

markup example:

```
normal text !{emphasis}! *{bold text}* _{underline} -{italics}/ {"citation"} " {superscript}· {subscript}, +{insertedtext}+ -{strikethrough}-
```

resulting output:

normal text **emphasis** **bold text** underline *italics* cite_{citation} cite_{citation} ^{superscript} _{subscript} inserted text strikethrough

260

normal text

261

emphasis

262

bold text

263

underline

264

italics

265

cite_{citation} cite_{citation}

266

^{superscript}

267

_{subscript}

268

inserted text

269

strikethrough

270

11.3 Indentation and bullets

markup example:

ordinary paragraph

_1 indent paragraph one step

_2 indent paragraph two steps

_9 indent paragraph nine steps

resulting output:

ordinary paragraph

indent paragraph one step

indent paragraph two steps

indent paragraph
nine steps

markup example:

_* bullet text

_1* bullet text, first indent

_2* bullet text, two step indent

resulting output:

- bullet text

- bullet text, first indent

- bullet text, two step indent

Numbered List (not to be confused with headings/titles, (document structure))

markup example:

numbered list numbered list 1., 2., 3, etc.

<=hash; numbered list numbered list indented a., b., c., d., etc.

11.4 Footnotes / Endnotes

292

275

276

Footnotes and endnotes not distinguished in markup. They are automatically numbered. Depending on the output file format (html, odf, pdf etc.), the document output selected will have either footnotes or endnotes.

markup example:

{ a footnote or endnote }

resulting output:

17

markup example:

normal text { self contained endnote marker & endnote in one }continues

resulting output:

normal text¹⁸ continues

markup example:

normal text { * unnumbered asterisk footnote/endnote, insert multiple asterisks if required }continues

normal text { ** another unnumbered asterisk footnote/endnote }continues

resulting output:

normal text * continues

normal text ** continues

markup example:

normal text {* editors notes, numbered asterisk footnote/endnote series }continues

normal text {+ editors notes, numbered asterisk footnote/endnote series }continues

resulting output:

normal text *³ continues

¹⁷ a footnote or endnote

¹⁸ self contained endnote marker and endnote in one

* unnumbered asterisk footnote/endnote, insert multiple asterisks if required

** another unnumbered asterisk footnote/endnote

310 normal text ⁺² continues

311 **Alternative endnote pair notation for footnotes/endnotes:**

312 % note the endnote marker ”

313 the standard and pair notation cannot be mixed in the same document

314 **11.5 Links**

315 **11.5.1 Naked URLs within text, dealing with urls**

316 urls are found within text and marked up automatically. A url within text is automatically hyperlinked to itself and by default decorated with angled braces, unless they are contained within a code block (in which case they are passed as normal text), or escaped by a preceding underscore (in which case the decoration is omitted).

317 **markup example:**

318 normal text http://www.jus.uio.no/sisu continues

319 **resulting output:**

320 normal text <<http://www.jus.uio.no/sisu>> continues

321 An escaped url without decoration

322 **markup example:**

323 normal text http://www.jus.uio.no/sisu continues

deb <http://www.jus.uio.no/sisu/archive> unstable main non-free

324 **resulting output:**

325 normal text <http://www.jus.uio.no/sisu> continues

326 deb <http://www.jus.uio.no/sisu/archive> unstable main non-free

327 where a code block is used there is neither decoration nor hyperlinking,

^{*3} editors notes, numbered asterisk footnote/endnote series

⁺² editors notes, numbered asterisk footnote/endnote series

code blocks are discussed later in this document

resulting output:

deb http://www.jus.uio.no/sisu/archive unstable main non-free

deb-src http://www.jus.uio.no/sisu/archive unstable main non-free

To link text or an image to a url the markup is as follows

markup example:

about { SiSU }<http://url.org> markup

11.5.2 Linking Text

resulting output:

about [SiSU](#) markup

A shortcut notation is available so the url link may also be provided automatically as a footnote

markup example:

about {

resulting output:

about [SiSU](#) ¹⁹ markup

11.5.3 Linking Images

markup example:

{tux.png 64x80 }image

% various url linked images

{tux.png 64x80 "a better way" }<http://www.jus.uio.no/sisu/>

{GnuDebianLinuxRubyBetterWay.png 100x101 "Way Better - with Gnu/Linux, Debian and Ruby"}<http://www.jus.uio.no/sisu/>

{

resulting output:

¹⁹ <<http://www.jus.uio.no/sisu>>

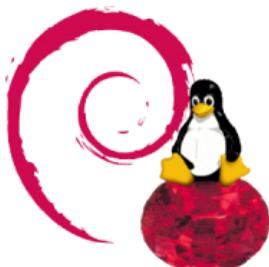

345

346

Gnu/Linux - a better way

[ruby_logo (png missing)]²⁰

348

Way Better - with Gnu/Linux, Debian and Ruby

linked url footnote shortcut

{

text marker *ñame

352

note at a heading level the same is automatically achieved by providing names to headings 1, 2 and 3 i.e. 2[*name*] and 3[*name*] or in the case of auto-heading numbering, without further intervention.

353

11.6 Grouped Text

11.6.1 Tables

354

Tables may be prepared in two either of two forms

355

markup example:

356

```
table{ c3; 40; 30; 30;
This is a table
this would become column two of row one
column three of row one is here
And here begins another row
column two of row two
column three of row two, and so on
}table
```

357

resulting output:

358

This is a table	this would become column two of row one	column three of row one is here
And here begins another row	column two of row two	column three of row two, and so on

359

a second form may be easier to work with in cases where there is not much information in each column

360

markup example:

361

¹_ Table 3.1: Contributors to Wikipedia, January 2001 - June 2005

362

365

366

11.6.2 Poem

368

basic markup:

369

```
poem{
```

Your poem here

```
}poem
```

Each verse in a poem is given a separate object number.

370

markup example:

371

```
poem{
```

'Fury said to a mouse, That he met in the house,
"Let us both go to law: I will prosecute YOU. --Come, I'll take no denial; We must have a trial: For really this morning I've nothing

to do."
Said the mouse to the cur, "Such a trial, dear Sir, With no jury or judge, would be wasting our breath."
"I'll be judge, I'll be jury," Said cunning old Fury:
"I'll try the whole cause, and condemn you to death."

```
}poem
```

resulting output:

'Fury said to a mouse, That he met in the house,
"Let us both go to

372

373

law: I will
prosecute
YOU. –Come,
I'll take no
denial; We
must have a
trial: For
really this
morning I've
nothing
to do.”

Said the
mouse to the
cur, “Such
a trial,
dear Sir,
With
no jury
or judge,
would be
wasting
our
breath.”

“I'll be
judge, I'll
be jury,”
Said
cunning

old Fury:
“I'll
try the
whole
cause,
and
condemn
you
to
death.””

11.6.3 Group

374

basic markup:

375

```
group{  
    Your grouped text here  
}group
```

376

A group is treated as an object and given a single object number.

markup example:

377

```
group{  
    'Fury said to a  
    mouse, That he  
    met in the  
    house,  
    "Let us  
    both go to  
    law: I will  
    prosecute  
    YOU. –Come,  
    I'll take no  
    denial; We  
    must have a  
    trial: For
```

378

really this
morning I've
nothing
to do."

Said the
mouse to the
cur, "Such
a trial,
dear Sir,
With
no jury
or judge,
would be
wasting
our
breath."

"I'll be
judge, I'll
be jury,"
Said
cunning
old Fury:
"I'll
try the
whole
cause,
and
condemn
you
to
death."

}group

resulting output:

'Fury said to a
mouse, That he
met in the
house,

"Let us
both go to
law: I will
prosecute
YOU. --Come,
I'll take no
denial; We
must have a
trial: For
really this
morning I've
nothing
to do."
Said the
mouse to the
cur, "Such
a trial,
dear Sir,
With
no jury
or judge,
would be
wasting
our
breath."
"I'll be
judge, I'll
be jury,"

Said
cunning
old Fury:
"I'll
try the
whole
cause,
and
condemn
you
to
death."

prosecute
YOU. —Come,
I'll take no
denial; We
must have a
trial: For
really this
morning I've
nothing
to do."
Said the
mouse to the
cur, "Such
a trial,
dear Sir,
With
no jury
or judge,
would be
wasting
our
breath."
"I'll be
judge, I'll
be jury."
Said
cunning
old Fury:
"I'll
try the
whole
cause,
and
condemn
you
to
death."

11.6.4 Code

Code tags are used to escape regular sisu markup, and have been used extensively within this document to provide examples of SiSU markup. You cannot however use code tags to escape code tags. They are however used in the same way as group or poem tags.

A code-block is treated as an object and given a single object number. [an option to number each line of code may be considered at some later time]

use of code tags instead of poem compared, resulting output:

'Fury said to a
mouse, That he
met in the
house,
"Let us
both go to
law: I will

386

12. Composite documents markup

387

It is possible to build a document by creating a master document that requires other documents. The documents required may be complete documents that could be generated independently, or they could be markup snippets, prepared so as to be easily available to be placed within another text. If the calling document is a master document (built from other documents), it should be named with the suffix **.ssm** Within this document you would provide information on the other documents that should be included within the text. These may be other documents that would be processed in a regular way, or markup bits prepared only for inclusion within a master document **.sst** regular markup file, or **.ssi** (insert/information) A secondary file of the composite document is built prior to processing with the same prefix and the suffix **.sst**

388

basic markup for importing a document into a master document

389

```
<< |filename1.sst|@|^j  
<< |filename2.ssi|@|^j
```

390

The form described above should be relied on. Within the Vim editor it results in the text thus linked becoming hyperlinked to the document it is calling in which is convenient for editing. Alternative markup for importation of documents under consideration, and occasionally supported have been.

391

```
r{filename}  
{filename.ssi}require  
<< {filename.ssi}  
% using textlink alternatives  
|filename.ssi|@|^jrequire  
<< |filename.ssi|@|^j  
% using thlnk alternatives  
<url:filename.ssi>require  
<< <url:filename.ssi>
```

MARKUP SYNTAX HISTORY**13. Notes related to Files-types and Markup Syntax**

0.38 is substantially current, depreciated 0.16 supported, though file names were changed at 0.37 394

0.52 (2007w14/6) declared document type identifier at start of text/document: 395

SiSU 0.52 396

or, backward compatible using the comment marker: 397

% SiSU 0.38 398

variations include ‘**SiSU** (text|master|insert) [version]’ and ‘sisu-[version]’ 399

0.51 (2007w13/6) skins changed (simplified), markup unchanged 400

0.42 (2006w27/4) * (asterisk) type endnotes, used e.g. in relation to author 401

0.38 (2006w15/7) introduced new/alternative notation for headers, e.g. @title: (instead of 0~ title), and accompanying document structure markup, :A,:B,:C,1,2,3 (maps to previous 1,2,3,4,5,6) 402

0.37 (2006w09/7) introduced new file naming convention, .sst (text), .ssm (master), .ssi (insert), markup syntax unchanged 403

0.35 (2005w52/3) sisupod, zipped content file introduced 404

0.23 (2005w36/2) utf-8 for markup file 405

0.22 (2005w35/3) image dimensions may be omitted if rmagick is available to be relied upon 406

0.20.4 (2005w33/4) header 0~ links 407

0.16 (2005w25/2) substantial changes introduced to make markup cleaner, header 0~ title type, and headings [1-6]~ introduced, also percentage sign (%) at start of a text line as comment marker 408

409 14. SiSU filetypes

410 SiSU has plaintext and binary filetypes, and can process either type of
document.

411 14.1 .sst .ssm .ssi marked up plain text

412 SiSU documents are prepared as plain-text (utf-8) files with SiSU
markup. They may make reference to and contain images (for example),
which are stored in the directory beneath them _sisu/image. SiSU
plaintext markup files are of three types that may be distinguished by
the file extension used: regular text .sst; master documents, composite
documents that incorporate other text, which can be any regular text or
text insert; and inserts the contents of which are like regular text except
these are marked .ssi and are not processed.

413 SiSU processing can be done directly against a sisu documents; which
may be located locally or on a remote server for which a url is pro-
vided.

414 SiSU source markup can be shared with the command:

415 sisu -s [filename]

416 14.1.1 sisu text - regular files (.sst)

417 The most common form of document in SiSU , see the section on SiSU
markup.

418 <http://www.jus.uio.no/sisu/sisu_markup>

419 <http://www.jus.uio.no/sisu/sisu_manual>

420 14.1.2 sisu master files (.ssm)

421 Composite documents which incorporate other SiSU documents which

may be either regular SiSU text .sst which may be generated indepen-
dently, or inserts prepared solely for the purpose of being incorporated
into one or more master documents.

422 The mechanism by which master files incorporate other documents is de-
scribed as one of the headings under under SiSU markup in the SiSU
manual.

423 Note: Master documents may be prepared in a similar way to regular
documents, and processing will occur normally if a .sst file is renamed
.ssm without requiring any other documents; the .ssm marker flags that
the document may contain other documents.

424 Note: a secondary file of the composite document is built prior to process-
ing with the same prefix and the suffix ..sst ²²

425 <http://www.jus.uio.no/sisu/sisu_markup>

426 <http://www.jus.uio.no/sisu/sisu_manual>

427 14.1.3 sisu insert files (.ssi)

428 Inserts are documents prepared solely for the purpose of being incorpo-
rated into one or more master documents. They resemble regular SiSU
text files except they are ignored by the SiSU processor. Making a file a
.ssi file is a quick and convenient way of flagging that it is not intended
that the file should be processed on its own.

429 14.2 sisupod, zipped binary container (sisupod.zip, .ssp)

430 A sisupod is a zipped SiSU text file or set of SiSU text files and any

²² .ssc (for composite) is under consideration but ..sst makes clear that this is not a regular
file to be worked on, and thus less likely that people will have “accidents”, working on a
.ssc file that is overwritten by subsequent processing. It may be however that when the
resulting file is shared .ssc is an appropriate suffix to use.

associated images that they contain (this will be extended to include sound and multimedia-files)

431 SiSU plaintext files rely on a recognised directory structure to find contents such as images associated with documents, but all images for example for all documents contained in a directory are located in the subdirectory `_sisu/image`. Without the ability to create a sisupod it can be inconvenient to manually identify all other files associated with a document. A sisupod automatically bundles all associated files with the document that is turned into a pod.

432 The structure of the sisupod is such that it may for example contain a single document and its associated images; a master document and its associated documents and anything else; or the zipped contents of a whole directory of prepared **SiSU** documents.

433 The command to create a sisupod is:

434 `sisu -S [filename]`

435 Alternatively, make a pod of the contents of a whole directory:

436 `sisu -S`

437 **SiSU** processing can be done directly against a sisupod; which may be located locally or on a remote server for which a url is provided.

438 <<http://www.jus.uio.no/sisu/sisu.commands>>

439 <http://www.jus.uio.no/sisu/sisu_manual>

15. Experimental Alternative Input Representations

440

15.1 Alternative XML

441

442 SiSU offers alternative XML input representations of documents as a proof of concept, experimental feature. They are however not strictly maintained, and incomplete and should be handled with care.

443 convert from sst to simple xml representations (sax, dom and node):

444 `sisu -to-sax [filename/wildcard] or sisu -to-sxs [filename/wildcard]`

445 `sisu -to-dom [filename/wildcard] or sisu -to-sxd [filename/wildcard]`

446 `sisu -to-node [filename/wildcard] or sisu -to-sxn [filename/wildcard]`

447 convert to sst from any sisu xml representation (sax, dom and node):

448 `sisu -from-xml2sst [filename/wildcard [.sxs.xml,.sxd.xml,sxn.xml]]`

449 or the same:

450 `sisu -from-sxml [filename/wildcard [.sxs.xml,.sxd.xml,sxn.xml]]`

15.1.1 XML SAX representation

451

To convert from sst to simple xml (sax) representation:

452 `sisu -to-sax [filename/wildcard] or sisu -to-sxs [filename/wildcard]`

To convert from any sisu xml representation back to sst

453 `sisu -from-xml2sst [filename/wildcard [.sxs.xml,.sxd.xml,sxn.xml]]`

454 or the same:

455 `sisu -from-sxml [filename/wildcard [.sxs.xml,.sxd.xml,sxn.xml]]`

15.1.2 XML DOM representation

458

To convert from sst to simple xml (dom) representation:

```
sisu --to-dom [filename/wildcard] or sisu --to-sxd [filename/wildcard]
```

To convert from any sisu xml representation back to sst

```
sisu --from-xml2sst [filename/wildcard [.sxs.xml,.sxd.xml,sxn.xml]]
```

or the same:

```
sisu --from-sxml [filename/wildcard [.sxs.xml,.sxd.xml,sxn.xml]]
```

15.1.3 XML Node representation

465

To convert from sst to simple xml (node) representation:

```
sisu --to-node [filename/wildcard] or sisu --to-sxn [filename/wildcard]
```

To convert from any sisu xml representation back to sst

```
sisu --from-xml2sst [filename/wildcard [.sxs.xml,.sxd.xml,sxn.xml]]
```

or the same:

```
sisu --from-sxml [filename/wildcard [.sxs.xml,.sxd.xml,sxn.xml]]
```

16. Configuration

472

16.1 Determining the Current Configuration

473

Information on the current configuration of **SiSU** should be available with the help command:

```
sisu -v
```

475

which is an alias for:

```
sisu --help env
```

476

Either of these should be executed from within a directory that contains sisu markup source documents.

477

16.2 Configuration files (config.yml)

478

SiSU configuration parameters are adjusted in the configuration file, which can be used to override the defaults set. This includes such things as which directory interim processing should be done in and where the generated output should be placed.

479

The **SiSU** configuration file is a yaml file, which means indentation is significant.

SiSU resource configuration is determined by looking at the following files if they exist:

./_sisu/sisurc.yml

~/.sisu/sisurc.yml

/etc/sisu/sisurc.yml

The search is in the order listed, and the first one found is used.

In the absence of instructions in any of these it falls back to the internal program defaults.

Configuration determines the output and processing directories and the

database access details.

If **SiSU** is installed a sample sisurc.yml may be found in
489 /etc/sisu/sisurc.yml

17. Skins

Skins modify the default appearance of document output on a document, 491 directory, or site wide basis. Skins are looked for in the following locations:

./_sisu/skin

~/.sisu/skin

/etc/sisu/skin

Within the skin directory are the following the default sub-directories 495 for document skins:

./skin/doc

./skin/dir

./skin/site

A skin is placed in the appropriate directory and the file named 499 skin_[name].rb

The skin itself is a ruby file which modifies the default appearances set in 500 the program.

17.1 Document Skin

Documents take on a document skin, if the header of the document specifies 502 a skin to be used.

@skin: skin_united_nations

17.2 Directory Skin

A directory may be mapped on to a particular skin, so all documents 505 within that directory take on a particular appearance. If a skin exists in the skin/dir with the same name as the document directory, it will automatically be used for each of the documents in that directory, (except

where a document specifies the use of another skin, in the skin/doc directory).

A personal habit is to place all skins within the doc directory, and symbolic links as needed from the site, or dir directories as required.

507 17.3 Site Skin

508 A site skin, modifies the program default skin.

509 17.4 Sample Skins

510 With SiSU installed sample skins may be found in:

511 /etc/sisu/skin/doc and /usr/share/doc/sisu/sisu_markup_samples/dfsg/_sisu/skin/doc

512 (or equivalent directory) and if sisu-markup-samples is installed also under:

513 /usr/share/doc/sisu/sisu_markup_samples/non-free/_sisu/skin/doc

514 Samples of list.yml and promo.yml (which are used to create the right column list) may be found in:

515 /usr/share/doc/sisu/sisu_markup_samples/dfsg/_sisu/skin/yml (or equivalent directory)

18. CSS - Cascading Style Sheets (for html, XHTML and XML)

516 CSS files to modify the appearance of SiSU html, XHTML or XML
517 may be placed in the configuration directory: ./_sisu/css; ~/.sisu/css or;
/etc/sisu/css and these will be copied to the output directories with the
command sisu -CC.

518 The basic CSS file for html output is html.css, placing a file of that name
in directory _sisu/css or equivalent will result in the default file of that
name being overwritten.

519 HTML: html.css

520 XML DOM: dom.css

521 XML SAX: sax.css

522 XHTML: xhtml.css

523 The default homepage may use homepage.css or html.css

524 Under consideration is to permit the placement of a CSS file with a different name in directory _sisu/css directory or equivalent, and change the default CSS file that is looked for in a skin.²³

²³ SiSU has worked this way in the past, though this was dropped as it was thought the complexity outweighed the flexibility, however, the balance was rather fine and this behaviour could be reinstated.

525

19. Organising Content

526

19.1 Directory Structure and Mapping

527

The output directory root can be set in the sisurc.yml file. Under the root, subdirectories are made for each directory in which a document set resides. If you have a directory named poems or conventions, that directory will be created under the output directory root and the output for all documents contained in the directory of a particular name will be generated to subdirectories beneath that directory (poem or conventions). A document will be placed in a subdirectory of the same name as the document with the filetype identifier stripped (.sst .ssm)

528

The last part of a directory path, representing the sub-directory in which a document set resides, is the directory name that will be used for the output directory. This has implications for the organisation of document collections as it could make sense to place documents of a particular subject, or type within a directory identifying them. This grouping as suggested could be by subject (sales_law, english_literature); or just as conveniently by some other classification (X University). The mapping means it is also possible to place in the same output directory documents that are for organisational purposes kept separately, for example documents on a given subject of two different institutions may be kept in two different directories of the same name, under a directory named after each institution, and these would be output to the same output directory. Skins could be associated with each institution on a directory basis and resulting documents will take on the appropriate different appearance.

529

19.2 Organising Content

20. Homepages

530

SiSU is about the ability to auto-generate documents. Home pages are regarded as custom built items, and are not created by **SiSU**. More accurately, **SiSU** has a default home page, which will not be appropriate for use with other sites, and the means to provide your own home page instead in one of two ways as part of a site's configuration, these being:

1. through placing your home page and other custom built documents in the subdirectory `_sisu/home/` (this probably being the easier and more convenient option)
2. through providing what you want as the home page in a skin,

531

Document sets are contained in directories, usually organised by site or subject. Each directory can/should have its own homepage. See the section on directory structure and organisation of content.

532

533

534

20.1 Home page and other custom built pages in a sub-directory

535

Custom built pages, including the home page `index.html` may be placed within the configuration directory `_sisu/home/` in any of the locations that is searched for the configuration directory, namely `./_sisu`; `~/_sisu`; `/etc/_sisu`. From there they are copied to the root of the output directory with the command:

```
sisu -CC
```

536

20.2 Home page within a skin

537

Skins are described in a separate section, but basically are a file written in the programming language **Ruby** that may be provided to change the defaults that are provided with sisu with respect to individual documents, a directories contents or for a site.

If you wish to provide a homepage within a skin the skin should be in the

538

539

directory _sisu/skin/dir and have the name of the directory for which it is to become the home page. Documents in the directory commercial_law would have the homepage modified in skin_commercial_law.rb; or the directory poems in skin_poems.rb

541

```
class Home
  def homepage
    # place the html content of your homepage here, this will become index.html
    <><HOME <html>
    <head></head>
<doc>
<p>this is my new homepage.</p>
</doc>
</html>
HOME
end
end
```

21. Markup and Output Examples

542

21.1 Markup examples

543

Current markup examples and document output samples are provided at
[<http://www.jus.uio.no/sisu/SiSU/2.html>](http://www.jus.uio.no/sisu/SiSU/2.html)

544

Some markup with syntax highlighting may be found under
[<http://www.jus.uio.no/sisu/sample/syntax>](http://www.jus.uio.no/sisu/sample/syntax) but is not as up to date.

545

For some documents hardly any markup at all is required at all, other than a header, and an indication that the levels to be taken into account by the program in generating its output are.

546

547

21.2 A few book (and other) examples

548

Aukio, by Leena Krohn²⁴

“War and Peace”, Leo Tolstoy, PG Etext 2600

661 “War and Peace”, Leo Tolstoy³³
 679 document manifest³⁴

³³ <http://www.jus.uio.no/sisu/war_and_peace.leo_tolstoy/toc.html>

The ascii text was taken from Project Gutenberg. The markup transforms required are trivial. Of interest, in this instance I am saved by having alternative syntaxes/(structural modes) for marking up endnotes... as it was possible to do a simple search and replace to make the Project Gutenberg ascii presentation suitable for SiSU , using the older endnote markup style. This example instructs the program to use regular expressions, in this example the words: none; none; BOOK|FIRST|SECOND; CHAPTER; occurring at the beginning of a line, to identify what should be treated as different levels of heading in a document (and used to make the table of contents). Note that there was very little markup required after the document headers and Project Gutenberg legal notices. As I presume the legal notices are similar in Project Gutenberg documents, (and I could not bear to think of preparing the same legal notices twice), I moved those to the “skin” for the Project, and these are now represented in the markup by <:insert1> and <:insert2> and the legal notices are available for similar insertion into the next Project Gutenberg text prepared for SiSU , should there be one.

I did a stylesheet/skin for the Gutenberg Project, ... I may have to remove. The markup transforms required are trivial. Of interest, in this instance I am saved by having alternative syntaxes/(structural modes) for marking up endnotes... as it is possible to do a simple search and replace to make Project Gutenberg ascii presentations suitable for SiSU using the older endnote markup style. There is very little markup required after the document headers and Project Gutenberg legal notices. As I presume the legal notices are similar in Project Gutenberg documents, (and I could not bear to think of preparing the same legal notices twice), I moved those to the “skin” for the Project, and these are now represented in the markup by the <:insert1> and <:insert2> markers and the legal notices are available for similar insertion into the next Project Gutenberg text prepared for SiSU , should there be one.

23. SiSU Search - Introduction

995

SiSU output can easily and conveniently be indexed by a number of stand-alone indexing tools, such as Lucene, Hyperestraier.

996

Because the document structure of sites created is clearly defined, and the text object citation system is available hypothetically at least, for all forms of output, it is possible to search the sql database, and either read results from that database, or just as simply map the results to the html output, which has richer text markup.

997

In addition to this SiSU has the ability to populate a relational sql type database with documents at an object level, with objects numbers that are shared across different output types, which make them searchable with that degree of granularity. Basically, your match criteria is met by these documents and at these locations within each document, which can be viewed within the database directly or in various output formats.

998

999 24. SQL

1000 24.1 populating SQL type databases

1001 SiSU feeds sisu markupd documents into sql type databases PostgreSQL⁶⁰ and/or SQLite⁶¹ database together with information related to document structure.

1002 This is one of the more interesting output forms, as all the structural data of the documents are retained (though can be ignored by the user of the database should they so choose). All site texts/documents are (currently) streamed to four tables:

- 1003 • one containing semantic (and other) headers, including, title, author, subject, (the Dublin Core...);
- 1004 • another the substantive texts by individual “paragraph” (or object) - along with structural information, each paragraph being identifiable by its paragraph number (if it has one which almost all of them do), and the substantive text of each paragraph quite naturally being searchable (both in formatted and clean text versions for searching); and
- 1005 • a third containing endnotes cross-referenced back to the paragraph from which they are referenced (both in formatted and clean text versions for searching).
- 1006 • a fourth table with a one to one relation with the headers table contains full text versions of output, eg. pdf, html, xml, and ascii.

1007 There is of course the possibility to add further structures.

1008 At this level SiSU loads a relational database with documents chunked

⁶¹ <<http://www.hwaci.com/sw/sqlite/>>
 <<http://en.wikipedia.org/wiki/Sqlite>>

1009 into objects, their smallest logical structurally constituent parts, as text objects, with their object citation number and all other structural information needed to construct the document. Text is stored (at this text object level) with and without elementary markup tagging, the stripped version being so as to facilitate ease of searching.

Being able to search a relational database at an object level with the SiSU citation system is an effective way of locating content generated by SiSU . As individual text objects of a document stored (and indexed) together with object numbers, and all versions of the document have the same numbering, complex searches can be tailored to return just the locations of the search results relevant for all available output formats, with live links to the precise locations in the database or in html/xml documents; or, the structural information provided makes it possible to search the full contents of the database and have headings in which search content appears, or to search only headings etc. (as the Dublin Core is incorporated it is easy to make use of that as well).

1010 25. Postgresql

1011 25.1 Name

1012 **SiSU** - Structured information, Serialized Units - a document publishing
system, postgresql dependency package

1013 25.2 Description

1014 Information related to using postgresql with sisu (and related to the
sisu_postgresql dependency package, which is a dummy package to in-
stall dependencies needed for **SiSU** to populate a postgresql database,
this being part of **SiSU** - man sisu).

1015 25.3 Synopsis

1016 **sisu -D [instruction] [filename/wildcard if required]**

1017 **sisu -D -pg -[instruction] [filename/wildcard if required]**

1018 25.4 Commands

1019 Mappings to two databases are provided by default, postgresql and
sqlite, the same commands are used within sisu to construct and populate
databases however -d (lowercase) denotes sqlite and -D (uppercase)
denotes postgresql, alternatively -sqlite or -pgsql may be used

1020 **-D or -pgsql** may be used interchangeably.

1021 25.4.1 create and destroy database

1022 **-pgsql -createall**

initial step, creates required relations (tables, indexes) in existing (post-
gresql) database (a database should be created manually and given the
same name as working directory, as requested) (rb.dbi)

sisu -D -createdb

creates database where no database existed before

sisu -D -create

creates database tables where no database tables existed before

sisu -D -Dropall

destroys database (including all its content)! kills data and drops tables,
indexes and database associated with a given directory (and directories of
the same name).

sisu -D -recreate

destroys existing database and builds a new empty database struc-
ture

1027 25.4.2 import and remove documents

sisu -D -import -v [filename/wildcard]

1028 populates database with the contents of the file. Imports documents(s)
specified to a postgresql database (at an object level).

sisu -D -update -v [filename/wildcard]

1029 updates file contents in database

sisu -D -remove -v [filename/wildcard]

1030 removes specified document from postgresql database.

1031 26. Sqlite

1032 26.1 Name

1033 **SiSU** - Structured information, Serialized Units - a document publishing
system.

1034 26.2 Description

1035 Information related to using sqlite with sisu (and related to the sisu_sqlite
dependency package, which is a dummy package to install dependencies
needed for **SiSU** to populate an sqlite database, this being part of **SiSU** -
man sisu).

1036 26.3 Synopsis

```
1037     sisu -d [instruction] [filename/wildcard if required]
1038     sisu -d -(sqlite|pg) -[instruction] [filename/wildcard if required]
```

1039 26.4 Commands

1040 Mappings to two databases are provided by default, postgresql and
sqlite, the same commands are used within sisu to construct and populate
databases however -d (lowercase) denotes sqlite and -D (uppercase)
denotes postgresql, alternatively –sqlite or –pgsql may be used

1041 **-d or –sqlite** may be used interchangeably.

1042 26.4.1 create and destroy database

1043 **–sqlite –createall**

initial step, creates required relations (tables, indexes) in existing (sqlite)

database (a database should be created manually and given the same name
as working directory, as requested) (rb.dbi)

sisu -d –createdb

creates database where no database existed before

sisu -d –create

creates database tables where no database tables existed before

sisu -d –dropall

destroys database (including all its content)! kills data and drops tables,
indexes and database associated with a given directory (and directories of
the same name).

sisu -d –recreate

destroys existing database and builds a new empty database struc-
ture

26.4.2 import and remove documents

sisu -d –import -v [filename/wildcard]

populates database with the contents of the file. Imports documents(s)
specified to an sqlite database (at an object level).

sisu -d –update -v [filename/wildcard]

updates file contents in database

sisu -d –remove -v [filename/wildcard]

removes specified document from sqlite database.

1052 27. Introduction

1053 27.1 Search - database frontend sample, utilising database and SiSU features, including object citation numbering (backend currently PostgreSQL)

1054 Sample search frontend⁶² A small database and sample query front-end (search from) that makes use of the citation system, object citation numbering to demonstrates functionality.⁶³

1055 SiSU can provide information on which documents are matched and at what locations within each document the matches are found. These results are relevant across all outputs using object citation numbering, which includes html, XML, LaTeX, PDF and indeed the SQL database. You can then refer to one of the other outputs or in the SQL database expand the text within the matched objects (paragraphs) in the documents matched.

1056 Note you may set results either for documents matched and object number locations within each matched document meeting the search criteria; or display the names of the documents matched along with the objects (paragraphs) that meet the search criteria.⁶⁴

1057 sisu -F –webserv-webrick

builds a cgi web search frontend for the database created

1058 The following is feedback on the setup on a machine provided by the help command:

⁶² <<http://search.sisudoc.org>>

⁶³ (which could be extended further with current back-end). As regards scaling of the database, it is as scalable as the database (here Postgresql) and hardware allow.

⁶⁴ of this feature when demonstrated to an IBM software innovations evaluator in 2004 he said to paraphrase: this could be of interest to us. We have large document management systems, you can search hundreds of thousands of documents and we can tell you which documents meet your search criteria, but there is no way we can tell you without opening each document where within each your matches are found.

sisu –help sql

```
1059 Postgresql
1060 user:      ralph
current db set:  SiSU_sisu
port:      5432
dbi connect:  DBI:Pg:database=SiSU_sisu;port=5432
sqlite
current db set: /home/ralph/sisu_www/sisu/sisu.sqlite.db
dbi connect  DBI:SQLite:/home/ralph/sisu_www/sisu/sisu.sqlite.db
```

Note on databases built

1061 By default, [unless otherwise specified] databases are built on a directory basis, from collections of documents within that directory. The name of the directory you choose to work from is used as the database name, i.e. if you are working in a directory called /home/ralph/ebook the database SiSU_ebook is used. [otherwise a manual mapping for the collection is necessary]

27.2 Search Form

sisu -F

generates a sample search form, which must be copied to the web-server cgi directory

sisu -F –webserv-webrick

generates a sample search form for use with the webrick server, which must be copied to the web-server cgi directory

sisu -Fv

as above, and provides some information on setting up hyperestraier

sisu -W

starts the webrick server which should be available wherever sisu is properly installed

The generated search form must be copied manually to the webserver directory as instructed

1069 28. Hyperestraier

1070 See the documentation for hyperestraier:

```
1071 <http://hyperestraier.sourceforge.net/>
1072 /usr/share/doc/hyperestraier/index.html
1073 man estcmd
```

1074 on sisu_hyperestraier:

```
1075 man sisu_hyperestraier
1076 /usr/share/doc/sisu/sisu_markup/sisu_hyperestraier/index.html
```

1077 NOTE: the examples that follow assume that sisu output is placed in the
directory /home/ralph/sisu_www

1078 (A) to generate the index within the webserver directory to be indexed:

```
1079 estcmd gather -sd [index name] [directory path to index]
```

1080 the following are examples that will need to be tailored according to your
needs:

```
1081 cd /home/ralph/sisu_www
1082 estcmd gather -sd casket /home/ralph/sisu_www
```

1083 you may use the ‘find’ command together with ‘egrep’ to limit indexing
to particular document collection directories within the web server direc-
tory:

```
1084 find /home/ralph/sisu_www -type f | egrep '/home/ralph/sisu_www/sisu/.+?.html$'
| estcmd gather -sd casket -
```

1085 Check which directories in the webserver/output directory (~ /sisu_www
or elsewhere depending on configuration) you wish to include in the search
index.

1086 As sisu duplicates output in multiple file formats, it it is probably prefer-

able to limit the estrainer index to html output, and as it may also be de-
sirable to exclude files ‘plain.txt’, ‘toc.html’ and ‘concordance.html’, as
these duplicate information held in other html output e.g.

```
find /home/ralph/sisu_www -type f | egrep '/sisu_www/(sisu|bookmarks)k+?.htm
| egrep -v '(doc|concordance).html$' | estcmd gather -sd casket -
```

from your current document preparation/markup directory, you would
1088 construct a rune along the following lines:

```
find /home/ralph/sisu_www -type f | egrep '/home/ralph/sisu_www/([specify
first directory for inclusion][specify second directory for
inclusion][another directory for inclusion? ...]).+?.html$'
| egrep -v '(doc|concordance).html$' | estcmd gather -sd
/home/ralph/sisu_www/casket -
```

(B) to set up the search form

(i) copy estseek.cgi to your cgi directory and set file permissions to
755:

```
sudo cp -vi /usr/lib/estraier/estseek.cgi /usr/lib/cgi-bin
```

```
sudo chmod -v 755 /usr/lib/cgi-bin/estseek.cgi
```

```
sudo cp -v /usr/share/hyperestraier/estseek.* /usr/lib/cgi-bin
```

[see estrainer documentation for paths]

(ii) edit estseek.conf, with attention to the lines starting ‘indexname:’ and
‘replace:’:

```
indexname: /home/ralph/sisu_www/casket
```

replace: file : //home/ralph/sisu_www{!}

```
replace: /index.html?$\{\!\}\}/
```

(C) to test using webrick, start webrick:

```
sisu -W
```

and try open the url: <<http://localhost:8081/cgi-bin/estseek.cgi>>

1103 **29. sisu_webrick**

1116

29.5 Document processing command flags1104 **29.1 Name**1105 **SiSU** - Structured information, Serialized Units - a document publishing system1106 **29.2 Synopsis**1107 `sisu_webrick [port]`1108 `or`1109 `sisu -W [port]`1110 **29.3 Description**1111 `sisu_webrick` is part of **SiSU** (man `sisu`) `sisu_webrick` starts **Ruby**'s Webrick web-server and points it to the directories to which **SiSU** output is written, providing a list of these directories (assuming **SiSU** is in use and they exist).1112 The default port for `sisu_webrick` is set to 8081, this may be modified in the yaml file: `~/.sisu/sisurc.yml` a sample of which is provided as `/etc/sisu/sisurc.yml` (or in the equivalent directory on your system).1113 **29.4 Summary of man page**1114 `sisu_webrick`, may be started on its own with the command: `sisu_webrick [port]` or using the `sisu` command with the `-W` flag: `sisu -W [port]`

1115 where no port is given and settings are unchanged the default port is 8081

1116 `sisu -W [port]` starts **Ruby** Webrick web-server, serving **SiSU** output directories, on the port provided, or if no port is provided and the defaults have not been changed in `~/.sisu/sisurc.yml` then on port 8081**29.6 Further information**1117 For more information on **SiSU** see: <<http://www.jus.uio.no/sisu>>1118 or man `sisu`**29.7 Author**1119 Ralph Amissah `[ralph@amissah.com]` or `[ralph.amissah@gmail.com]`**29.8 SEE ALSO**1120 `sisu(1)`1121 `sisu_vim(7)`1122 `sisu(8)`

1127

30. Remote Source Documents

1128

SiSU processing instructions can be run against remote source documents by providing the url of the documents against which the processing instructions are to be carried out. The remote **SiSU** documents can either be sisu marked up files in plaintext .sst or .ssm or; zipped sisu files, sisupod.zip or filename.ssp

1129

.sst / .ssm - sisu text files

1130

SiSU can be run against source text files on a remote machine, provide the processing instruction and the url. The source file and any associated parts (such as images) will be downloaded and generated locally.

1131

```
sisu -3 http://[provide url to valid .sst or .ssm file]
```

1132

Any of the source documents in the sisu examples page can be used in this way, see <<http://www.jus.uio.no/sisu/SiSU/2.html>> and use the url for the desired document.

1133

NOTE: to set up a remote machine to serve **SiSU** documents in this way, images should be in the directory relative to the document source `./_sisu/image`

1134

sisupod - zipped sisu files

1135

A sisupod is the zipped content of a sisu marked up text or texts and any other associated parts to the document such as images.

1136

SiSU can be run against a sisupod on a (local or) remote machine, provide the processing instruction and the url, the sisupod will be downloaded and the documents it contains generated locally.

1137

```
sisu -3 http://[provide url to valid sisupod.zip or .ssp file]
```

1138

Any of the source documents in the sisu examples page can be used in this way, see <<http://www.jus.uio.no/sisu/SiSU/2.html>> and use the url for the desired document.

1139

REMOTE DOCUMENT OUTPUT

31. Remote Output

1140

Once properly configured SiSU output can be automatically posted once generated to a designated remote machine using either rsync, or scp.

1141

In order to do this some ssh authentication agent and keychain or similar tool will need to be configured. Once that is done the placement on a remote host can be done seamlessly with the -r (for scp) or -R (for rsync) flag, which may be used in conjunction with other processing flags, e.g.

1142

```
sisu -3R sisu.remote.sst
```

1143

31.1 commands

1144

-R [filename/wildcard]

1145

copies sisu output files to remote host using rsync. This requires that sisurc.yml has been provided with information on hostname and username, and that you have your “keys” and ssh agent in place. Note the behavior of rsync different if -R is used with other flags from if used alone. Alone the rsync –delete parameter is sent, useful for cleaning the remote directory (when -R is used together with other flags, it is not). Also see -r

-r [filename/wildcard]

1146

copies sisu output files to remote host using scp. This requires that sisurc.yml has been provided with information on hostname and username, and that you have your “keys” and ssh agent in place. Also see -R

31.2 configuration

1147

[expand on the setting up of an ssh-agent / keychain]

1148

1149

32. Remote Servers

As **SiSU** is generally operated using the command line, and works within a Unix type environment, **SiSU** the program and all documents can just as easily be on a remote server, to which you are logged on using a terminal, and commands and operations would be pretty much the same as they would be on your local machine.

1150

33. Download SiSU - Linux/Unix

1151

SiSU Current Version - Linux/Unix

1152

Source (tarball tar.gz)

1153

Download the latest version of **SiSU** (and **SiSU** markup samples):⁶⁵

1154

- [sisu_0.59.1.orig.tar.gz \(of 2007-09-23:38/7\)](#)⁶⁶

1155

cgi generated sample search form

1156

order results on files of the same title, in multiple files (with different filenames)

1157

postgresql, character case sensitivity, control, on/off

1158

tail decoration, gplv3 and sisu info

1159

texinfo/info (pinfo) module starts to do something vaguely useful again [not a much used module, testing required]

1160

print XML rendition of document structure to screen -T

1161

help on environment visited, sisu -V

1162

sisurc.yml default, color set to true [apologies if this causes anyone any inconvenience, it is configurable in sisurc.yml]

1163

help and man pages, some work man(8) related

1164

sisu-install (install ruby rant script renamed) and permissions set to executable

1165

- [sisu-markup-samples_1.0.8.orig.tar.gz \(of 2007-08-19:33/7\)](#)⁶⁷

1166

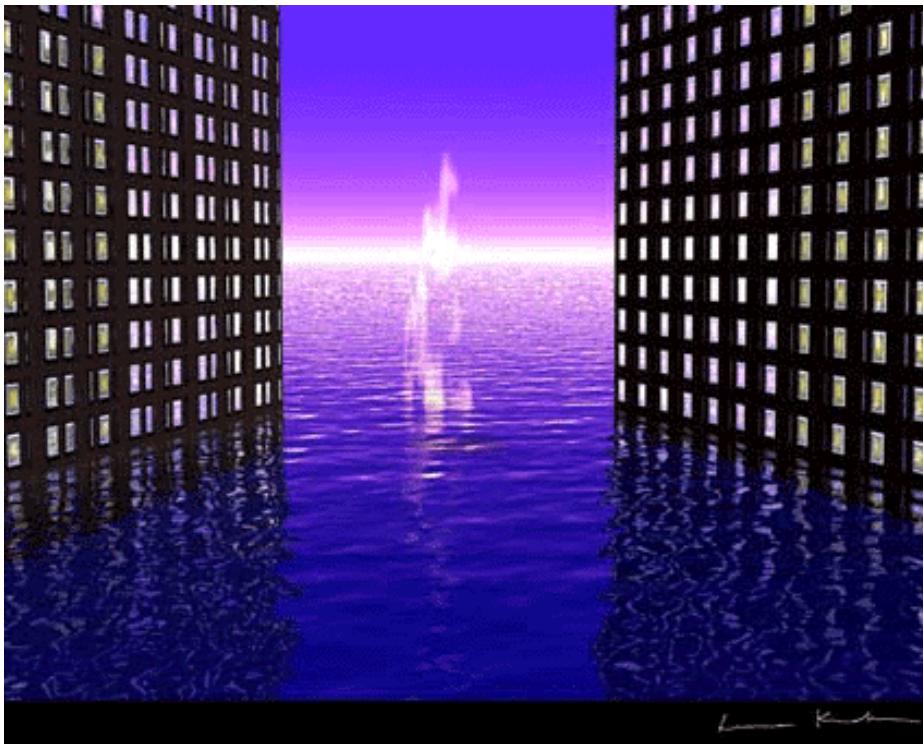

For installation notes see <<http://www.jus.uio.no/sisu/SiSU/download.html>>

1167

1205

INSTALLATION

34. Installation

1206

See the [download pages](#)⁸³ for information related to installation.

1207

34.1 Debian

1208

SiSU is developed on **Debian**, and packages are available for **Debian** that take care of the dependencies encountered on installation.

1209

The package is divided into the following components:

1210

sisu, the base code, (the main package on which the others depend), without any dependencies other than ruby (and for convenience the ruby webrick web server), this generates a number of types of output on its own, other packages provide additional functionality, and have their dependencies

1211

sisu-complete, a dummy package that installs the whole of greater sisu as described below, apart from sisu-examples

1212

sisu-pdf, dependencies used by sisu to produce pdf from LaTeX generated

1213

sisu-postgresql, dependencies used by sisu to populate postgresql database (further configuration is necessary)

1214

sisu-remote, dependencies used to place sisu output on a remote server (further configuration is necessary)

1215

sisu-sqlite, dependencies used by sisu to populate sqlite database

1216

sisu-markup-samples, sisu markup samples and other miscellany (under **Debian** Free Software Guidelines non-free)

1217

SiSU is available off [Debian Unstable and Testing](#)⁸⁴ install it using apt-

1218

⁸³ <<http://www.jus.uio.no/sisu/SiSU/download>>
<http://www.jus.uio.no/sisu/sisu_download>

get, aptitude or alternative **Debian** install tools. **SiSU** is currently comprised of eight packages.

Initial packaging is done here and to get the latest version of **SiSU** available you may add the following line(s) to your sources list:

```
#/etc/apt/sources.list
deb http://www.jus.uio.no/sisu/archive unstable main non-free
deb-src http://www.jus.uio.no/sisu/archive unstable main non-free
```

The non-free section is for sisu markup samples provided, which contain authored works the substantive text of which cannot be changed, and which as a result do not meet the debian free software guidelines.

On **Debian** there is little more to know beyond how to install software on **Debian** using apt, aptitude or synaptic.

```
#Using aptitude:
aptitude update
aptitude install sisu-complete sisu-markup-samples

Using apt-get
apt-get update
apt get install sisu-complete sisu-examples
```

34.2 Other Unix / Linux

A source tarball or an rpms built using alien are available, (however dependencies have not been tested). **SiSU** is first packaged and tested with dependency handling for **Debian**.⁸⁵ Information on dependencies configured for **Debian** is provided as this may be of assistance.

34.2.1 source tarball

installation with provided install script

To install **SiSU**, in the root directory of the unpacked **SiSU** as root

⁸⁴ <<http://packages.qa.debian.org/s/sisu.html>>

⁸⁵ Notes on dependencies are provided in the section that follows

type:⁸⁶

ruby install

Once installed see man 8 sisu for information on additional programs that sisu makes use of.

Further notes on install script.

The install script is prepared using Rant, and a Rantfile is provided,⁸⁷ with more comprehensive install options, and post install and setup configuration and generation of first test file, if you have installed Stefan Lang's Rant⁸⁸ installed. While in the package directory, type: rant help, or rant -T, or to install **SiSU** as root, type:

install is an install script prepared using Stefan Lang's Rant⁸⁹ It should work whether you have previously installed Rant or not. It has fairly comprehensive install options, and can do some post install and setup configuration and generation of first test file. For options type:

ruby install -T

To install as root type:

ruby install

For a minimal install type:

ruby install base

installation with setup.rb

setup.rb⁹⁰ is provided the package and will install **SiSU**⁹¹ installation

⁸⁶ This makes use of rant and the provided Rantfile. Note however, that additional external package dependencies, such as tetex-extra are not taken care of for you.

⁸⁷ a Rantfile has been configured to do post installation setup

⁸⁸ <<http://make.rubyforge.org/>> <<http://make.rubyforge.org/>>
<http://rubyforge.org/frs/?group_id=615>

⁸⁹ <<http://make.rubyforge.org/>> <<http://make.rubyforge.org/>>
<http://rubyforge.org/frs/?group_id=615>

is a 3 step process⁹² the following string assumes you are in the package directory and that you have root as sudo:

1242 ruby setup.rb config ruby setup.rb setup sudo ruby setup.rb install
1243 **installation of rpm**

1244 The RPM is generated from the source file using Alien.⁹³ Dependencies
are not handled, not even that of the essential **Ruby**.

35. SiSU Components, Dependencies and Notes

The dependency lists are from the **Debian** control file for **SiSU** version 0.36, and may assist in building **SiSU** on other distributions.

35.1 sisu

- the base code, (the main package on which the others depend), without any dependencies other than ruby (and for convenience the ruby webrick web server), this generates a number of types of output on its own, other packages provide additional functionality, and have their dependencies

Depends: on ruby (\geq 1.8.2), libwebrick-ruby

Recommends: sisu-pdf, sisu-sqlite, sisu-postgresql, sisu-examples, librmagick-ruby, trang, tidy, libtidy, librexml-ruby, zip, unzip, openssl

initialise directory

sisu -CC

html

sisu -hv [filename/wildcard]

sisu -Hv [filename/wildcard]

LaTeX (but sisu-pdf dependencies required to convert that to pdf)

sisu -pv [filename/wildcard]

plain text Unix with footnotes

sisu -av [filename/wildcard]

plain text Dos with footnotes

sisu -Av [filename/wildcard]

plain text Unix with endnotes

90 <<http://i.loveruby.net/en/projects/setup/>>

91 Minero Aoki

<<http://i.loveruby.net/en/projects/setup/doc/>>

92 Installation instructions

Depends: sisu, rsync, openssh-client|lsh-client, keychain

1341

35.7 sisu-sqlite

- dependencies used by sisu to populate sqlite database

1342

Depends: sisu, sqlite, libdbi-ruby, libdbm-ruby, libdbd-sqlite-ruby

1343

Suggests: libdbd-sqlite
 1348 installs dependencies for sisu to work with and populate sqlite
 database
 1349 create database
 1350 sisu -dv createall
 1351 drop database
 1352 sisu -dv dropall
 1353 update content
 1354 sisu -div [filename/wildcard]
 1355 sisu -dv import [filename/wildcard]
 1356 update content
 1357 sisu -duv [filename/wildcard]
 1358 sisu -dv update [filename/wildcard]
 1359 [the -v is for verbose]
 1360 The following are available without installation of the sisu-sqlite component, but are of interest in this context
 1361 generate a sample database query form for use with webserver on port
 80
 1362 sisu -F
 1363 or for use with webrick server
 1364 sisu -F webrick
 1365 to start webrick server
 1366 sisu -W

36. Quickstart - Getting Started Howto

36.1 Installation

Installation is currently most straightforward and tested on the **Debian** platform, as there are packages for the installation of sisu and all requirements for what it does.

36.1.1 Debian Installation

SiSU is available directly from the **Debian** Sid and testing archives (and possibly Ubuntu), assuming your /etc/apt/sources.list is set accordingly:

```
aptitude update
aptitude install sisu-complete
```

The following /etc/apt/sources.list setting permits the download of additional markup samples:

```
#/etc/apt/sources.list
deb http://ftp.fi.debian.org/debian/ unstable main non-free contrib
deb-src http://ftp.fi.debian.org/debian/ unstable main non-free contrib
d
```

The aptitude commands become:

```
aptitude update
aptitude install sisu-complete sisu-markup-samples
```

If there are newer versions of SiSU upstream of the **Debian** archives, they will be available by adding the following to your /etc/apt/sources.list

```
#/etc/apt/sources.list
deb http://www.jus.uio.no/sisu/archive unstable main non-free
deb-src http://www.jus.uio.no/sisu/archive unstable main non-free
```

repeat the aptitude commands

```
aptitude update
aptitude install sisu-complete sisu-markup-samples
```

Note however that it is not necessary to install sisu-complete if not all

components of sisu are to be used. Installing just the package sisu will provide basic functionality.

36.1.2 RPM Installation

RPMs are provided though untested, they are prepared by running alien against the source package, and against the debs.

They may be downloaded from:

<http://www.jus.uio.no/sisu/SiSU/download.html#rpm>

as root type:

`rpm -i [rpm package name]`

36.1.3 Installation from source

To install **SiSU** from source check information at:

<http://www.jus.uio.no/sisu/SiSU/download.html#current>

- download the source package
- Unpack the source

Two alternative modes of installation from source are provided, setup.rb (by Minero Aoki) and a rant(by Stefan Lang) built install file, in either case: the first steps are the same, download and unpack the source file:

For basic use **SiSU** is only dependent on the programming language in which it is written **Ruby**, and **SiSU** will be able to generate html, various XMLs, including ODF (and will also produce LaTeX). Dependencies required for further actions, though it relies on the installation of additional dependencies which the source tarball does not take care of, for things like using a database (postgresql or sqlite)⁹⁴ or converting LaTeX to pdf.

⁹⁴ There is nothing to stop MySQL support being added in future.

setup.rb

This is a standard ruby installer, using setup.rb is a three step process. In the root directory of the unpacked **SiSU** as root type:

```
ruby setup.rb config
ruby setup.rb setup
#[and as root:]
ruby setup.rb install
```

further information on setup.rb is available from:

<<http://i.loveruby.net/en/projects/setup/>>
<<http://i.loveruby.net/en/projects/setup/doc/usage.html>>

“install”

The “install” file provided is an installer prepared using “rant”. In the root directory of the unpacked **SiSU** as root type:

`ruby install base`

or for a more complete installation:

`ruby install`

or

`ruby install base`

This makes use of Rant (by Stefan Lang) and the provided Rantfile. It has been configured to do post installation setup setup configuration and generation of first test file. Note however, that additional external package dependencies, such as tetex-extra are not taken care of for you.

Further information on “rant” is available from:

<<http://make.rubyforge.org/>>
<http://rubyforge.org/frs/?group_id=615>

For a list of alternative actions you may type:

`ruby install help`

`ruby install -T`

36.2 Testing SiSU, generating output

To check which version of sisu is installed:

sisu -v

Depending on your mode of installation one or a number of markup sample files may be found either in the directory:

...

or

...

change directory to the appropriate one:

cd /usr/share/doc/sisu/sisu_markup_samples/dfsg

36.2.1 basic text, plaintext, html, XML, ODF

Having moved to the directory that contains the markup samples (see instructions above if necessary), choose a file and run sisu against it

sisu -NhwoabXyv free_as_in_freedom.rms_and_free_software.sam_williams.sst

this will generate html including a concordance file, opendocument text format, plaintext, XHTML and various forms of XML, and OpenDocument text

36.2.2 LaTeX / pdf

Assuming a LaTeX engine such as tetex or texlive is installed with the required modules (done automatically on selection of sisu-pdf in **Debian**)

Having moved to the directory that contains the markup samples (see instructions above if necessary), choose a file and run sisu against it

sisu -pv free_as_in_freedom.rms_and_free_software.sam_williams.sst

sisu -3 free_as_in_freedom.rms_and_free_software.sam_williams.sst

should generate most available output formats: html including a concordance file, opendocument text format, plaintext, XHTML and various forms of XML, and OpenDocument text and pdf

36.2.3 relational database - postgresql, sqlite

Relational databases need some setting up - you must have permission to create the database and write to it when you run sisu.

Assuming you have the database installed and the requisite permissions

sisu --sqlite --recreate

sisu --sqlite -v --import free_as_in_freedom.rms_and_free_software.sam_williams.sst

sisu --pgsql --recreate

sisu --pgsql -v --import free_as_in_freedom.rms_and_free_software.sam_williams.sst

36.3 Getting Help

36.3.1 The man pages

Type:

man sisu

The man pages are also available online, though not always kept as up to date as within the package itself:

- [sisu.1](#)⁹⁵

- [sisu.8](#)⁹⁶

- [man directory](#)⁹⁷

⁹⁵ <<http://www.jus.uio.no/sisu/man/sisu.1>>

⁹⁶ <<http://www.jus.uio.no/sisu/man/sisu.8>>

1449 36.3.2 Built in help

1450 sisu –help
1451 sisu –help –env
1452 sisu –help –commands
1453 sisu –help –markup

1454 36.3.3 The home page

1455 <<http://www.jus.uio.no/sisu>>
1456 <<http://www.jus.uio.no/sisu/SiSU>>

1457 36.4 Markup Samples

1458 A number of markup samples (along with output) are available off:

1459 <<http://www.jus.uio.no/sisu/SiSU/2.html>>

1460 Additional markup samples are packaged separately in the file:

1461 *

1462 On **Debian** they are available in non-free⁹⁸ to include them it is necessary
to include non-free in your /etc/apt/source.list or obtain them from the sisu
home site.

⁹⁷ <<http://www.jus.uio.no/sisu/man>>

⁹⁸ the **Debian** Free Software guidelines require that everything distributed within **Debian**
can be changed - and the documents are authors' works that while freely distributable are
not freely changeable.

1463

HOWTO

37. Getting Help

1464

An online manual of sorts should be available at:

1465

<http://www.jus.uio.no/sisu_manual/>

1466

The manual pages provided with **SiSU** are also available online, and there is an interactive help, which is being superseded by the man page, and possibly some document which contains this component.

1467

37.1 SiSU “man” pages

1468

If **SiSU** is installed on your system usual man commands should be available, try:

1469

`man sisu`

1470

The **SiSU** man pages can be viewed online at:⁹⁹

1471

An online version of the sisu man page is available here:

1472

- [various sisu man pages](#)¹⁰⁰
- [sisu.1](#)¹⁰¹
- [sisu.8](#)¹⁰²
- [sisu_examples.1](#)¹⁰³
- [sisu_webrick.1](#)¹⁰⁴

1473

1474

1475

1476

1477

⁹⁹ generated from source using rman

<<http://polyglotman.sourceforge.net/rman.html>>

With regard to **SiSU** man pages the formatting generated for markup syntax is not quite right, for that you might prefer the links under:

<<http://www.jus.uio.no/sample>>

¹⁰⁰<<http://www.jus.uio.no/sisu/man/>>

¹⁰¹<<http://www.jus.uio.no/sisu/man/sisu.1.html>>

¹⁰²<<http://www.jus.uio.no/sisu/man/sisu.8.html>>

¹⁰³<http://www.jus.uio.no/sisu/man/sisu_examples.1.html>

¹⁰⁴<http://www.jus.uio.no/sisu/man/sisu_webrick.1.html>

1478 37.2 SiSU built-in help

1479 sisu –help
 1480 sisu –help [subject]
 1481 sisu –help env [for feedback on the way your system is setup
 with regard to sisu]
 1482 sisu -V [same as above command]
 1483 sisu –help commands
 1484 sisu –help markup

1485 37.3 Command Line with Flags - Batch Processing

1486 Running sisu (alone without any flags, filenames or wildcards) brings
 up the interactive help, as does any sisu command that is not recogni-
 sed.

1487 In the data directory run sisu -mh filename or wildcard eg. “sisu -h
 cisg.sst” or “sisu -h *.{sst,ssm}” to produce html version of all docu-
 ments.

1488 38. Setup, initialisation

1489 38.1 initialise output directory

1490 Images, css files for a document directory are copied to their respective
 locations in the output directory.

1491 while within your document markup/preparation directory, issue the fol-
 lowing command

1492 sisu -CC

1493 38.1.1 Use of search functionality, an example using sqlite

1494 SiSU can populate PostgreSQL and Sqlite databases and provides a sam-
 ple search form for querying these databases.

1495 This note provides an example to get you started and will use sqlite
 It is necessary to:

- 1496 (1) make sure the required dependencies have been installed
 - 1497 (2) have a directory with sisu markup samples that is writable
 - 1498 (3) use sisu to create a database
 - 1499 (4) use sisu tp populate a database
 - 1500 (5) use sisu to start the webrick (httpd) server
 - 1501 (6) use sisu to create a search form
 - 1502 (7) copy the search form to the cgi directory
 - 1503 (8) open up the form in your browser
 - 1504 (9) query the database using the search form
- 1506 (1) make sure the required dependencies have been installed**
- 1507 if you use **Debian** , the following command will install the required de-

pendencies
1508 aptitude install sisu-sqlite
1509 **(2) have a directory with sisu markup samples that is writable**
1510 ideally copy the sisu-examples directory to your home directory (because
the directory in which you run this example should be writable)
1511 cp -rv /usr/share/sisu-examples/sample/document_samples_sisu_markup
~/.
1512 **(3) use sisu to create an sqlite database**
1513 within the sisu-examples directory
1514 sisu -dv createall
1515 **(4) use sisu tp populate a database with some text**
1516 within the sisu-examples directory
1517 sisu -div free_*.sst
1518 or
1519 sisu -dv import free_*.sst debian_constitution_v1.2.sst de-
bian_social_contract_v1.1.sst gpl2.fsf.sst
1520 **(5) use sisu to start the webrick (httpd) server (if it has not already**
been started):
1521 sisu -W
1522 **(6) use sisu to create a search form (for use with the webrick server,**
and your sample documents)
1523 within the sisu-examples directory
1524 sisu -F webrick
1525 #here i run into a problem, you are working from a read only #directory...,
not my usual mode of operation, to complete the example #the following is
necessary sudo touch sisu_sqlite.cgi sisu_pgsql.cgi sudo -P chown \$USER
sisu_sqlite.cgi sisu_pgsql.cgi

#now this should be possible: sisu -F webrick
1526 **(7) copy the search form to the cgi directory**
1527 the string should be provided as output from the previous command
1528 sudo cp -vi /usr/share/sisu-examples/sample/document_samples_sisu_markup/*sisu_*/sisu_*/sc
/ /usr/lib/cgi-bin
1529 sudo chmod -v 755 /usr/lib/cgi-bin/sisu_sqlite.cgi
1530 **(8) open up the form in your browser and query it**
1531 url:
1532 <http://localhost:8081/cgi-bin/sisu_sqlite.cgi>
1533 or as instructed by command sisu -F webrick
1534 **(9) query the database using the search form**
1535 if there are other options in the dropdown menu select
1536 document_samples_sisu_markup
1537 and search for some text, e.g.:
1538 aim OR project
1539 • selecting the **index** radio button gives an index of results using the
object numbers
1540 • selecting the **text** radio button gives the content of the matched para-
graphs with the match highlighted
1541 **(10) to start again with a new database**
1542 to start from scratch you can drop the database with the command
1543 sisu -dv dropall
1544 and go to step 3
1545 to get to step 3 in one step with a single command
1546 sisu -dv recreate
1547 continue subsequent steps
1548

1549 **38.2 misc**

rsync

1568

1550 **38.2.1 url for output files -u -U**

sisu -vR[and processing flags] [filename/wildcard]

1569

1551 sisu -uv[and other flags] [filename/wildcard]

1552 sisu -Uv [filename/wildcard]

1553 **38.2.2 toggle screen color**

1554 sisu -cv[and processing flags] [filename/wildcard]

1555 **38.2.3 verbose mode**

1556 sisu -v[and processing flags] [filename/wildcard]

1557 sisu -V[and processing flags] [filename/wildcard]

1558 **38.2.4 quiet mode**

1559 sisu -q[and processing flags] [filename/wildcard]

1560 **38.2.5 maintenance mode intermediate files kept -M**

1561 sisu -Mv[and other flags] [filename/wildcard]

1562 **38.2.6 start the webrick server**

1563 sisu -W

1564 **38.3 remote placement of output**

1565 configuration is necessary

1566 scp

1567 sisu -vr[and processing flags] [filename/wildcard]

1570 39. Configuration Files

1571 Sample provided, on untarring the source tarball:

1572 conf/sisu/sisurc.yaml

1573 and on installation under:

1574 /etc/sisu/sisurc.yaml

1575 The following paths are searched:

1576 ./_sisu/sisurc.yaml

1577 ~/.sisu/sisurc.yaml

1578 ./etc/sisu/sisurc.yaml

40. Markup

1579 See sample markup provided on

1580 <<http://www.jus.uio.no/sisu>>

1581 <http://www.jus.uio.no/sisu_markup>

1582 <<http://www.jus.uio.no/sisu/SiSU>>

1583 in particular for each of the document output samples provided, the source
document is provided as well

1584 <http://www.jus.uio.no/sisu/SiSU/2#books>

1585 on untarring the source tarball:

1586 data/sisu-examples/sample/document_samples_sisu_markup/

1587 or the same once source is installed (or sisu-examples) under:

1588 /usr/share/sisu-examples/sample/document_samples_sisu_markup/

1589 Some notes are contained within the man page, **man sisu** and within sisu
help via the commands **sisu help markup** and **sisu help headers**

1590 **SiSU** is for literary and legal text, also for some social science material. In
particular it does not do formula, and is not particularly suited to technical
documentation. Despite the latter caveat, some notes will be provided here
and added to over time:

40.1 Headers

1591 Headers @headername: provide information related to the document, this
may relate to

1592 1. how it is to be processed, such as whether headings are to be numbered,
what skin is to be used and markup instructions, such as the document
structure, or words to be made bold within the document

1593 2. semantic information about the document including the dublin
core

40.2 Font Face

1596 Defaults are set. You may change the face to: bold, italics, underscore,
1597 strikethrough, ...

40.2.1 Bold

1598 bold: [list of words that should be made bold within document]

1599 **bold line**

1600 !_ bold line

1601 **bold word or sentence**

1602 !{ bold word or sentence }!

1603 *{ bold word or sentence }*

1604 **boldword or boldword**

1605 *boldword* or !boldword!

40.2.2 Italics

1606 italics: [list of words that should be italicised within document]

1607 *italicise word or sentence*

1608 /{ italicise word or sentence }/

1609 *italicisedword*

1610 /italicisedword/

40.2.3 Underscore

1611 underline word or sentence

1612 _{ underscore word or sentence }_-

1613 underscoreword

40.2.4 Strikethrough

1614 ~~strikethrough word or sentence~~

1615 -{ strikethrough word or sentence }-

1616 ~~strikeword~~

1617 ~~-strikeword-~~

40.3 Endnotes

1618 There are two forms of markup for endnotes, they cannot be mixed within
1619 the same document

1620 here¹⁰⁵

1621 1. preferred endnote markup

1622 here~ { this is an endnote }~

1623 2. alternative markup equivalent, kept because it is possible to search and
1624 replace to get markup in existing texts such as Project Gutenberg

1625 here~

1626 ~thisisanendnote

1678

To import another document, the master document or importing document
should be named filename.r3 (r for require)

1679

<< { filename.sst }

1680

<< { filename.ssi }

1681

1682

1683 41. Change Appearance

1684 41.1 Skins

1685 “Skins” may be used to change various aspects related to the output documents appearance, including such things as the url for the home page on which the material will be published, information on the credit band, and for html documents colours and icons used in navigation bars. Skins are ruby files which permit changing of the default values set within the program for **SiSU** output.

1686 There are a few examples provided, on untarring the source tarball:

```
1687 conf/sisu/skin/doc/
1688      data/sisu-examples/sample/document_samples_sisu_markup/_sisu/skin/doc
```

1689 and on installation under:

```
1690 /etc/sisu/skin/doc/
1691      /usr/share/sisu-examples/sample/document_samples_sisu_markup/_sisu/skin/doc
```

1692 The following paths are searched:

```
1693 ./_sisu/skin
1694      ~/.sisu/skin
1695      /etc/sisu/skin
```

1696 Skins under the searched paths in a per document directory, a per directory directory, or a site directory, named:

1697 doc [may be specified individually in each document]

1698 dir [used if identifier part of name matches markup directory name]

1699 site

1700 It is usual to place all skins in the document directory, with symbolic links as required from dir or site directories.

41.2 CSS

1701 The appearance of html and XML related output can be changed for an ouput collection directory by prepareing and placing a new css file in one of the sisu css directories searched in the sisu configuration path. These are located at:

1703 .../_sisu/css

1704 ~/.sisu/css

1705 and

1706 /etc/sisu/css

1707 The contents of the first directory found in the search path are copied to the corresponding sisu output directory with the commnd:

1708 sisu -CC

1709 The **SiSU** standard css files for **SiSU** output are:

```
1710 dom.css html.css html_tables.css index.css sax.css xhtml.css
```

1711 A document may specify its own/bespoke css file using the css header.

1712 css:

1713 [expand]

SiSU 0.55 2007w27/6 2007-07-07

1716

1717
Homepage: <<http://www.jus.uio.no/sisu>>

1717

1718
Description

1718

1719
SiSU is lightweight markup based document creation and publishing framework that is controlled from the command line. Prepare documents for **SiSU** using your text editor of choice, then use **SiSU** to generate various output document formats.

1719

1720
With minimal preparation of a plain-text (UTF-8) file using its native markup-syntax, **SiSU** produces: plain-text, HTML, XHTML, XML, ODF:ODT (Opendocument), LaTeX, PDF, and populates an SQL database (PostgreSQL or SQLite) in paragraph sized chunks so that document searches are done at this “atomic” level of granularity.

1720

1721
Outputs share a common citation numbering system, and any semantic meta-data provided about the document.

1721

1722
SiSU also provides concordance files, document content certificates and manifests of generated output.

1722

1723
SiSU takes advantage of well established open standard ways of representing text, and provides a bridge to take advantage of the strengths of each, while remaining simple. **SiSU** implements across document formats a “useful common feature set” [coming from a humanities, law, and possibly social sciences perspective, rather than technical or scientific writing] ... focus is primarily on content and data integrity rather than appearance, (though outputs in the various formats are respectable).

1723

1724
A vim syntax highlighting file and an ftplugin with folds for sisu markup is provided. Vim 7 includes syntax highlighting for **SiSU**.

1724

1725
man pages, and interactive help are provided.

1725

1726
Dependencies for various features are taken care of in sisu related pack-

1726

ages. The package sisu-complete installs the whole of **SiSU**.

Additional document markup samples are provided in the package sisu-markup-samples which is found in the non-free archive the licenses for the substantive content of the marked up documents provided is that provided by the author or original publisher.

1728 Homepage: <<http://www.jus.uio.no/sisu>>

1729 **SiSU** - simple information structuring universe, is a publishing tool, document generation and management, (and search enabling) tool primarily for literary, academic and legal published works.

1730 **SiSU** can be used for Internet, Intranet, local filesystem or cd publishing.

1731 **SiSU** can be used directly off the filesystem, or from a database.

1732 **SiSU**'s scalability, is be dependent on your hardware, and filesystem (in my case Reiserfs), and/or database Postgresql.

1733 Amongst it's characteristics are:

- 1734 • simple mnemonic markup style,
- 1735 • the ability to produce multiple output formats, including html, structured XML, LaTeX, pdf (via LaTeX), stream to a relational database whilst retaining document structure - Postgresql and Sqlite,
- 1736 • that all share a common citation system (a simple idea from which much good), possibly most exciting, the following: if fed into a relational database (as it can be automatically), the document set is searchable, with results displayed at a paragraph level, or the possibility of an indexed display of documents in which the match is found together with a hyperlinked listing for each of each paragraph in which the match is found. In any event citations using this system (with or without the relational database) are relevant for all output formats.
- 1737 • it is command line driven, and can be set up on a remote server
- 1738 • Documents are marked up in **SiSU** syntax in your favourite editor.

SiSU syntax may be regarded as a type of smart ascii - which in its basic form is simpler than the most elementary html. There is currently a syntax highlighter, and folding for Vim. Syntax highlighters for other editors are welcome.

1739 Input files should be UTF-8

1740 Once set up it is simple to use.

42.1 Online Information, places to look

1741 <<http://www.jus.uio.no/sisu>>

1742 Download Sources:

1743 <http://www.jus.uio.no/sisu/SiSU/download.html#current>

1744 <http://www.jus.uio.no/sisu/SiSU/download.html#debian>

42.2 Installation

1745 NB. Platform is Unix / Linux.

42.2.1 Debian

1746 If you use **Debian** use the **Debian** packages, check the information at:

1747 <http://www.jus.uio.no/sisu/SiSU/download.html#debian>

1748 (A) **SiSU** is available directly off the **Debian** archives for Sid and testing. It should necessary only to run as root:

1749 aptitude update

1750 aptitude install sisu-complete

(B) If there are newer versions of **SiSU** upstream of the **Debian** archives, they will be available by adding the following to your /etc/apt/sources.list

1755 deb <<http://www.jus.uio.no/sisu/archive>> unstable main non-free
1756 deb-src <<http://www.jus.uio.no/sisu/archive>> unstable main non-free

1757 [the non-free line is for document markup samples, for which the substantive text is provided under the author or original publisher's license and which in most cases will not be debian free software guideline compliant]

1758 Then as root run:

1759 aptitude update
1760 aptitude install sisu-complete

42.2.2 RPM

1762 RPMs are provided though untested, they are prepared by running alien against the source package, and against the debs.

1763 They may be downloaded from:

1764 <http://www.jus.uio.no/sisu/SiSU/download.html#rpm>

42.2.3 Source package .tgz

1766 Otherwise to install **SiSU** from source, check information at:

1767 <http://www.jus.uio.no/sisu/SiSU/download.html#current>

1768 alternative modes of installation from source are provided, setup.rb (by Minero Aoki), rake (by Jim Weirich) built install file, rant (by Stefan Lang) built install file,

1769 **Ruby** is the essential dependency for the basic operation of **SiSU**

1770 1. Download the latest source (information available) from:

1754 <http://www.jus.uio.no/sisu/SiSU/download.html#current>

2. Unpack the source

1771 Note however, that additional external package dependencies, such as
1772 texlive or postgresql should you desire to use it are not taken care of for
1773 you.

42.2.4 to use setup.rb

1774 this is a three step process, in the root directory of the unpacked **SiSU** as
1775 root type:

1776 ruby setup.rb config

1777 ruby setup.rb setup

1778 as root:

1779 ruby setup.rb install

1780 further information:

1781 <<http://i.loveruby.net/en/projects/setup/>>

1782 <<http://i.loveruby.net/en/projects/setup/doc/usage.html>>

42.2.5 to use install (prapared with “Rake”)

1783 Rake must be installed on your system:

1784 <<http://rake.rubyforge.org/>>

1785 <http://rubyforge.org/frs/?group_id=50>

1786 in the root directory of the unpacked **SiSU** as root type:

1787 rake

1788 or

1789 rake base

This makes use of Rake (by Jim Weirich) and the provided Rakefile

For a list of alternative actions you may type:

rake help

rake -T

42.2.6 to use install (prepared with “Rant”)

(you may use the instructions above for rake substituting rant if rant is installed on your system, or you may use an independent installer created using rant as follows:)

in the root directory of the unpacked **SiSU** as root type:

ruby ./sisu-install

or

ruby ./sisu-install base

This makes use of Rant (by Stefan Lang) and the provided Rantfile. It has been configured to do post installation setup setup configuration and generation of first test file. Note however, that additional external package dependencies, such as tetex-extra are not taken care of for you.

further information:

<<http://make.rubyforge.org/>>

<http://rubyforge.org/frs/?group_id=615>

For a list of alternative actions you may type:

ruby ./sisu-install help

ruby ./sisu-install -T

180891

42.3 Dependencies

1809

Once installed see ‘man 8 sisu’ for some information on additional programs that sisu makes use of, and that you may need or wish to install. (this will depend on such factors as whether you want to generate pdf, whether you will be using **SiSU** with or without a database, ...) ‘man sisu_markup-samples’ may also be of interest if the sisu-markup-samples package has also been installed.

1810

The information in man 8 may not be most up to date, and it is possible that more useful information can be gleaned from the following notes taken from the **Debian** control file (end edited), gives an idea of additional packages that **SiSU** can make use of if available, (the use/requirement of some of which are interdependent for specific actions by **SiSU**).

1811

The following is from the debian/control file of sisu-0.58.2, which amongst other things provides the dependencies of sisu within **Debian**

.

Package: sisu

Suggests: kdissert, lv, rcs | cvs, pinfo, texinfo, trang

Description: documents - structuring, publishing in multiple formats and search

SiSU is a lightweight markup based, command line oriented, document structuring, publishing and search framework for document collections.

With minimal preparation of a plain-text, (UTF-8) file, using its native markup syntax in your text editor of choice, SiSU can generate various document formats (most of which share a common object numbering system for locating content), including plain text, HTML, XHTML, XML, OpenDocument text (ODF:ODT), LaTeX, PDF files, and populate an SQL database with objects (roughly paragraph-sized chunks) so searches may be performed and matches returned with that degree of granularity: your search criteria is met by these documents and at these locations within each document. Object numbering is particularly suitable for "published" works (finalized texts as opposed to works that are frequently changed or updated) for which it provides a fixed means of reference of content. Document outputs also share semantic meta-data provided.

SiSU also provides concordance files, document content certificates and manifests of generated output.

A vim syntax highlighting file and an ftplugin with folds for sisu markup is provided, as are syntax highlighting files for kate, kwrite, gedit and diakonos. Vim 7 includes syntax highlighting for SiSU.

man pages, and interactive help are provided.

Dependencies for various features are taken care of in sisu related packages. The package sisu-complete installs the whole of SiSU.

Additional document markup samples are provided in the package sisu-markup-samples which is found in the non-free archive the licenses for the substantive content of the marked up documents provided is that provided by the author or original publisher.

Homepage: <<http://www.jus.uio.no/sisu>>

Package: sisu-complete

Architecture: all

Depends: ruby (>= 1.8.2), sisu, sisu-pdf, sisu-postgresql, sisu-sqlite

Recommends: hyperestraier

Description: installs all SiSU related packages

This package installs SiSU and related packages that enable sisu to produce pdf and to populate postgresql and sqlite databases.

SiSU is a lightweight markup based document publishing framework.

See sisu for a description of the package.

Homepage: <<http://www.jus.uio.no/sisu>>

Package: sisu-pdf

Architecture: all

Depends: sisu, texlive-latex-base, texlive-fonts-recommended, texlive-latex-recommended, texlive-latex-extra

#Suggests: evince, xpdf

Description: dependencies to convert SiSU LaTeX output to pdf

This package enables the conversion of SiSU LaTeX output to pdf.

SiSU is a lightweight markup based document publishing framework.

1814

1815

Homepage: <<http://www.jus.uio.no/sisu>>

Package: sisu-postgresql

Architecture: all

Depends: sisu, libdbd-pg-ruby, libdbi-ruby, libdbm-ruby, postgresql

Recommends: libfcgi-ruby

Suggests: postgresql-contrib

Description: SiSU dependencies for use with postgresql database

This package enables SiSU to populate a postgresql database. This is done at an object/paragraph level, making granular searches of documents possible.

This relational database feature of SiSU is not required but provides interesting possibilities, including that of granular searches of documents for matching units of text, primarily paragraphs that can be displayed or identified by object citation number, from which an index of documents matched and each matched paragraph within them can be displayed.

SiSU is a lightweight markup based document publishing framework.

Homepage: <<http://www.jus.uio.no/sisu>>

Package: sisu-sqlite

Architecture: all

Depends: sisu, sqlite, libdbd-sqlite-ruby, libdbi-ruby, libdbm-ruby

Recommends: libfcgi-ruby

Description: SiSU dependencies for use with sqlite database

This package enables SiSU to populate an sqlite database. This is done at an object/paragraph level, making granular searches of documents possible.

This relational database feature of SiSU is not required but provides interesting possibilities, including that of granular searches of documents for matching units of text, primarily paragraphs that can be displayed or identified by object citation number, from which an index of documents matched and each matched paragraph within them can be displayed.

SiSU is a lightweight markup based document publishing framework.

Homepage: <<http://www.jus.uio.no/sisu>>

181816

42.4 Quick start

Most of the installation should be taken care of by the aptitude or rant install. (The rant install if run in full will also test run the generation of the first document).

After installation of sisu-complete, move to the document samples directory

`cd /usr/share/doc/sisu/sisu_markup_samples/dfsg`

and run

`sisu -3 free_as_in_freedom.rms_and_free_software.sam_williams.sst`

or the same:

`sisu -NhwpoabxXyv free_as_in_freedom.rms_and_free_software.sam_williams.sst`

look at output results, see the “sisu_manifest” page created for the document

or to generate an online document move to a writable directory, as the file will be downloaded there and e.g.

`sisu -3 <http://www.jus.uio.no/sisu/free_culture.lawrence_lessig/free_culture.lawrence_lessig.sst>`

the database stuff is extra perhaps, the latex stuff could be considered extra perhaps but neither needs to be installed for most of sisu output to work

examine source document, vim has syntax support

`gvim free_as_in_freedom.rms_and_free_software.sam_williams.sst`

additional markup samples in

`<http://www.jus.uio.no/sisu/SiSU/2.html>`

For help

`man sisu`

or

1837 sisu –help
 1838 e.g.
 1839 for the way sisu “sees/maps” your system
 1840 sisu –help env
 1841 for list of commands and so on
 1842 sisu –help commands

42.5 Configuration files

1843 The default configuration/setup is contained within the program and
 1844 is altered by configuration settings in *etc*[sisu version]/sisurc.yml or in
 1845 ~/.sisu/sisurc.yml

- configuration file - a yaml file

1846 /etc/sisu/[sisu version]/sisurc.yml
 1847 ~/.sisu/sisurc.yml

- directory structure - setting up of output and working directory.

1848 * skins - changing the appearance of a project, directory or individual
 1849 documents within ~/.sisu/skin

1850 ~/.sisu/skin/doc contains individual skins, with symbolic links from
 1851 ~/.sisu/skin/dir if the contents of a directory are to take a particular
 1852 document skin.

- additional software - eg. Tex and LaTeX (tetex, tetex-base, tetex-extra
 1853 on **Debian**), Postgresql, [sqlite], trang, tidy, makeinfo, ... none of which
 1854 are required for basic html or XML processing.

- if you use Vim as editor there is a syntax highlighter and fold resource
 config file for **SiSU** . I hope more syntax highlighters follow.

1854 There are post installation steps (which are really part of the overall in-

stallation)

1855 sisu -C in your marked up document directory, should do some auto-
 1856 configuring provided you have the right permissions for the output di-
 1857 rectories. (and provided the output directories have already been specified
 1858 if you are not using the defaults).

42.6 Use General Overview

1859 Documents are marked up in **SiSU** syntax and kept in an ordinary text
 1860 editable file, named with the suffix .sst, or .ssm

1861 Marked up **SiSU** documents are usually kept in a sub-directory of your
 1862 choosing

use the interactive help and man pages

sisu –help

man sisu

42.7 Help

interactive help described below, or man page:

man sisu

man 8 sisu

‘man sisu_markup-samples’ [if the sisu-markup-samples package is also
 1866 installed]

Once installed an interactive help is available typing ‘sisu’ (without) any
 1867 flags, and select an option:

sisu

alternatively, you could type e.g.

sisu –help commands

1872 sisu –help env
 1873 sisu –help headers
 1874 sisu –help markup
 1875 sisu –help headings
 1876 etc.
 1877 for questions about mappings, output paths etc.

1878 sisu –help env
 1879 sisu –help path
 1880 42.8 Directory Structure
 1881 Once installed, type:
 1882 sisu –help env
 1883 or
 1884 sisu -V

1885 42.9 Configuration File

1886 The defaults can be changed via **SiSU** ’s configure file sisurc.yml which
 1887 the program expects to find in `./sisu` `~/.sisu` or `/etc/sisu` (searched in that
 1888 order, stopping on the first one found)

1889 42.10 Markup

1890 See man pages.
 1891 man sisu

1892

man 8 sisu

Once installed there is some information on **SiSU** Markup in its
 1893 help:

1894 sisu –help markup
 1895 and

1896 sisu –help headers

Sample marked up document are provided with the download tarball in
 1897 the directory:

1898 ./data/doc/sisu/sisu_markup_samples/dfsg

These are installed on the system usually at:

1899 /usr/share/doc/sisu/sisu_markup_samples/dfsg

More markup samples are available in the package sisu-markup-
 1900 samples

[1901 http://www.jus.uio.no/sisu/SiSU/download.html#sisu-markup-samples](http://www.jus.uio.no/sisu/SiSU/download.html#sisu-markup-samples)

Many more are available online off:

1902 <<http://www.jus.uio.no/sisu/SiSU/2.html>>

1903 42.11 Additional Things

There is syntax support for some editors provided (together with a
 1904 README file) in

1905 ./data/sisu/conf/syntax

usually installed to:

1906 /usr/share/sisu/conf/syntax

42.12 License

1908

1909 License: GPL 3 or later see the copyright file in

1910 ./data/doc/sisu

1911 usually installed to:

1912 /usr/share/doc/sisu

42.13 SiSU Standard

1914 **SiSU** uses:

- 1915 • Standard **SiSU** markup syntax,
- 1916 • Standard **SiSU** meta-markup syntax, and the
- 1917 • Standard **SiSU** object citation numbering and system

1918 © Ralph Amissah 1997, current 2006 All Rights Reserved.

CHANGELOG

1921 ./CHANGELOG

1922 and see

1923 <<http://www.jus.uio.no/sisu/SiSU/changelog.html>>

1924 <http://www.jus.uio.no/sisu/SiSU/changelog_markup_samples.html>

1925

EXTRACTS FROM MAN 8 SISU**43. Post Installation Setup**

1926

43.1 Post Installation Setup - Quick start

1927

After installation of sisu-complete, move to the document samples directory,

1928

```
cd /usr/share/doc/sisu/sisu_markup_samples/dfsg
```

1929

[this is not where you would normally work but provides sample documents for testing, you may prefer instead to copy the contents of that directory to a local directory before proceeding]

1930

and in that directory, initialise the output directory with the command

1931

```
sisu -CC
```

1932

then run:

1933

```
sisu -1 free_as_in_freedom.rms_and_free_software.sam_williams.sst
```

1934

or the same:

1935

```
sisu -NhwpoabxXyv free_as_in_freedom.rms_and_free_software.sam_williams.sst
```

1936

look at output results, see the “sisu_manifest” page created for the document

1937

for an overview of your current sisu setup, type:

1938

```
sisu --help env
```

1939

or

1940

```
sisu -V
```

1941

To generate a document from a remote url accessible location move to a writable directory, (create a work directory and cd into it) as the file will be downloaded there and e.g.

1942

```
sisu -1 <http://www.jus.uio.no/sisu/gpl3.fsf/gpl3.fsf.sst>
```

1943

1945 sisu -3 <http://www.jus.uio.no/sisu/free_culture.lawrence_lessig/free_culture.lawrence_lessig.sst> 196244

examine source document, vim has syntax highlighting support

gvim free_as_in_freedom.rms_and_free_software.sam_williams.sst

additional markup samples in

<<http://www.jus.uio.no/sisu/SiSU/2.html>>

1949 it should also be possible to run sisu against sisupods (prepared zip files, created by running the command sisu -S [filename]), whether stored locally or remotely.

1950 sisu -3 <http://www.jus.uio.no/sisu/free_culture.lawrence_lessig/sisupod.zip>

1951 there is a security issue associated with the running of document skins that are not your own, so these are turned off by default, and the use of the following command, which switches on the associated skin is not recommended:

1952 sisu -3 –trust <http://www.jus.uio.no/sisu/free_culture.lawrence_lessig/sisupod.zip>

1953 For help

1954 man sisu

1955 sisu –help

1956 sisu –help env for the way sisu “sees/maps” your system

1957 sisu –help commands for list of commands and so on

1958 43.2 Document markup directory

1959 Perhaps the easiest way to begin is to create a directory for sisu marked up documents within your home directory, and copy the file structure (and document samples) provided in the document sample directory:

1960 mkdir ~ /sisu_test

1961 cd ~ /sisu_test

cp -a /usr/share/doc/sisu/sisu_markup_samples/dfsg/* ~ /sisu_test/.

1963 **Tip:** the markup syntax examples may be of interest

1964 <<http://www.jus.uio.no/sisu/sample/>>

1965 **Tip:**

1966 sisu -U [sisu markup filename]

1967 should printout the different possible outputs and where sisu would place them.

1968 **Tip:** if you want to toggle ansi color add

1969 c

1970 to your flags.

1971 43.2.1 Configuration files

1972 SiSU configuration file search path is:

1973 ./_sisu/sisurc.yaml

1974 ~/._sisu/sisurc.yaml

1975 /etc/sisu/sisurc.yaml

1976 .% % **Debian** Installation Note

1977 43.2.2 Debian INSTALLATION Note

1978 It is best you see

1979 <http://www.jus.uio.no/sisu/SiSU/download.html#debian>

1980 for up the most up to date information.

1981 notes taken from the **Debian** control file (end edited), gives an idea of additional packages that **SiSU** can make use of if available, (the

use/requirement of some of which are interdependent for specific actions by **SiSU**):

1982 Package: sisu

1983 **SiSU** is a lightweight markup based, command line oriented, document structuring, publishing and search framework for document collections.

1984 With minimal preparation of a plain-text, (UTF-8) file, using its native markup syntax in your text editor of choice, **SiSU** can generate various document formats (most of which share a common object numbering system for locating content), including plain text, HTML, XHTML, XML, OpenDocument text (ODF:ODT), LaTeX, PDF files, and populate an SQL database with objects (roughly paragraph-sized chunks) so searches may be performed and matches returned with that degree of granularity: your search criteria is met by these documents and at these locations within each document. Object numbering is particularly suitable for “published” works (finalized texts as opposed to works that are frequently changed or updated) for which it provides a fixed means of reference of content. Document outputs also share semantic meta-data provided.

1985 **SiSU** also provides concordance files, document content certificates and manifests of generated output.

1986 A vim syntax highlighting file and an ftplugin with folds for sisu markup is provided, as are syntax highlighting files for kate, kwrite, gedit and diakonos. Vim 7 includes syntax highlighting for **SiSU**.

1987 man pages, and interactive help are provided.

1988 Dependencies for various features are taken care of in sisu related packages. The package sisu-complete installs the whole of **SiSU**.

1989 Additional document markup samples are provided in the package sisu-markup-samples which is found in the non-free archive the licenses for the substantive content of the marked up documents provided is that provided by the author or original publisher.

Homepage: <<http://www.jus.uio.no/sisu>>

43.2.3 Document Resource Configuration

1990 **sisu** resource configuration information is obtained from sources (where they exist):

1991 ~ ./sisu/sisurc.yaml

1992 /etc/sisu/[sisu version]/sisurc.yaml

1993 sisu program defaults

43.2.4 Skins

1994 **Skins** default document appearance may be modified using skins contained in sub-directories located at the following paths:

1995 ./_sisu/skin

1996 ~ ./sisu/skin

1997 /etc/sisu/skin

1998 more specifically, the following locations (or their /etc/sisu equivalent) should be used:

2000 ~ ./sisu/skin/doc

2001 skins for individual documents;

2002 ~ ./sisu/skin/dir

2003 skins for directories of matching names;

2004 ~ ./sisu/skin/site

2005 site-wide skin modifying the site-wide appearance of documents.

2006 Usually all skin files are placed in the document skin directory:

2007 ~ ./sisu/skin/doc

with softlinks being made to the skins contained there from other skin
directories as required.

44. FAQ - Frequently Asked/Answered Questions

44.1 Why are urls produced with the -v (and -u) flag that point to a web server on port 8081?

Try the following rune:

- sisu -W

This should start the ruby webserver. It should be done after having pro-
duced some output as it scans the output directory for what to serve.

44.2 I cannot find my output, where is it?

The following should provide help on output paths:

- sisu --help env
- sisu -V [same as the previous command]
- sisu --help directory
- sisu --help path
- sisu -U [filename]
- man sisu

44.3 I do not get any pdf output, why?

SiSU produces LaTeX and pdflatex is run against that to generate pdf
files.

If you use **Debian** the following will install the required dependen-
cies

- aptitude install sisu-pdf

the following packages are required: tetex-bin, tetex-extra, latex-
ucs

2029 44.4 Where is the latex (or some other interim) output?

2030 Try adding -M (for maintenance) to your command flags, e.g.:

- 2031 • sisu -HpMv [filename]

2032 this should result in the interim processing output being retained, and information being provided on where to find it.

- 2033 • sisu –help directory
2034 • sisu –help path

2035 should also provide some relevant information as to where it is placed.

2036 44.5 Why isn't SiSU markup XML

2037 I worked with text and (though I find XML immensely valuable) disliked noise ... better to sidestep the question and say:

2038 SiSU currently “understands” three XML input representations - or more accurately, converts from three forms of XML to native SiSU markup for processing. The three types correspond to SAX (structure described), DOM (structure embedded, whole document must be read before structure is correctly discernable) and node based (a tree) forms of XML document structure representation. Problem is I use them very seldom and check that all is as it should be with them seldom, so I would not be surprised if something breaks there, but as far as I know they are working. I will check and add an XML markup help page before the next release. There already is a bit of information in the man page under the title **SiSU VERSION CONVERSION**

2039 sisu –to-sax [filename/wildcard]

2040 sisu –to-dom [filename/wildcard]

2041 sisu –to-node [filename/wildcard]

2042

The XML should be well formed... must check, but lacks sensible headers. Suggestions welcome as to what to make of them. [For the present time I am satisfied that I can convert (both ways) between 3 forms of XML representation and SiSU markup].

sisu –from-xml2sst [filename/wildcard]

2043

2044 44.6 LaTeX claims to be a document preparation system for high-quality typesetting. Can the same be said about SiSU?

2045 SiSU is not really about type-setting.

2046 LaTeX is the ultimate computer instruction type-setting language for paper based publication.

2047 LaTeX is able to control just about everything that happens on page and pixel, position letters kerning, space variation between characters, words, paragraphs etc. formula.

2048 SiSU is not really about type-setting at all. It is about a lightweight markup instruction that provides enough information for an abstraction of the documents structure and objects, from which different forms of representation of the document can be generated.

2049 SiSU with very little markup instruction is able to produce relatively high quality pdf by virtue of being able to generate usable default LaTeX; it produces “quality” html by generating the html directly; likewise it populates an SQL database in a useful way with the document in object sized chunks and its meta-data. But SiSU works on an abstraction of the document’s structure and content and custom builds suitable uniform output. The html for browser viewing and pdf for paper viewing/publishing are rather different things with different needs for layout - as indeed is what is needed to store information in a database in searchable objects.

2050 The pdfs or html produced for example by open office based on open document format and other office/word processor suits usually attempt

to have similar looking outputs - your document rendered in html looks much the same, or in pdf... sisu is less this way, it seeks to have a starting point with as little information about appearance as possible, and to come up with the best possible appearance for each output that can be derived based on this minimal information.

2051 Where there are large document sets, it provides consistency in appearance in each output format for the documents.

2052 The excuse for going this way is, it is a waste of time to think much about appearance when working on substantive content, it is the substantive content that is relevant, not the way it looks beyond the basic informational tags - and yet you want to be able to take advantage of as many useful different ways of representing documents as are available, and for various types of output to look as good as it can for each medium/format in which it is presented, (with different mediums having different focuses) and **SiSU** tries to achieve this from minimal markup.

2053 44.7 How do I create GIN or GiST index in Postgresql for use in SiSU

2054 This at present needs to be done “manually” and it is probably necessary to alter the sample search form. The following is a helpful response from one of the contributors of GiN to Postgresql Oleg Bartunov 2006-12-06:

2055 “I have tsearch2 slides which introduces tsearch2 <http://www.sai.msu.su/~megera/wiki/tsearch2slides>

2056 FTS in PostgreSQL is provided by tsearch2, which should work without any indices (GiST or GIN)! Indices provide performance, not functionality.

2057 In your example I’d do (simple way, just for demo):

2058 0. compile, install tsearch2 and load tsearch2 into your database

2059 cd contrib/tsearch2; makeinstallmake installcheck; psql DB < tsearch2.sql

2060 1. Add column fts, which holds tsvector

2061 alter table documents add column fts tsvector;

2062 2. Fill fts column

2063 update document set fts = to_tsvector(clean);

2064 3. create index - just for performance !

2065 create index fts_gin_idx on document using gin(fts);

2066 4. Run vacuum

2067 vacuum analyze document;

2068 That’s all.

2069 Now you can search:

2070 select lid, metadata_tid, rank_cd(fts, q,2)as rank from document, plainto_tsquery('markup syntax') q where q @@ fts order by rank desc limit 10;

2071 44.8 Where is version 1.0?

2072 **SiSU** works pretty well as it is supposed to. Version 1.0 will have the current markup, and directory structure. At this point it is largely a matter of choice as to when the name change is made.

2073 The feature set for html,¹¹⁰ LaTeX/pdf and opendocument is in place. XML, and plaintext are in order.

2074 html and LaTeX/pdf may be regarded as reference copy outputs

2075 With regard to the populating of sql databases (postgresql and sqlite), there is a bit to be done.

2076 We are still almost there.

¹¹⁰html w3c compliance has been largely met.

45. Editor Files, Syntax Highlighting

The directory:

./data/sisu/conf/editor-syntax-etc/

/usr/share/sisu/conf/editor-syntax-etc

contains rudimentary sisu syntax highlighting files for:

- (g)vim <<http://www.vim.org>>

package: sisu-vim

status: largely done

there is a vim syntax highlighting and folds component

- gedit <<http://www.gnome.org/projects/gedit>>

- gobby <<http://gobby.0x539.de>>

file: sisu.lang

place in:

/usr/share/gtksourceview-1.0/language-specs

or

~/.gnome2/gtksourceview-1.0/language-specs

status: very basic syntax highlighting

comments: this editor features display line wrap and is used by Goby!

- nano <<http://www.nano-editor.org>>

file: nanorc

save as:

~/.nanorc

status: basic syntax highlighting

2100

comments: assumes dark background; no display line-wrap; does line breaks

- diakonos (an editor written in ruby) <<http://purepistos.net/diakonos>>

file: diakonos.conf

save as:

~/.diakonos/diakonos.conf

includes:

status: basic syntax highlighting

comments: assumes dark background; no display line-wrap

- kate and kwrite <<http://kate.kde.org>>

file: sisu.xml

place in:

/usr/share/apps/katepart/syntax

or

~/.kde/share/apps/katepart/syntax

[settings::configure kate::{highlighting,filetypes}]

[tools::highlighting::{markup,scripts}::SiSU]

- nedit <<http://www.nedit.org>>

file: sisu_nedit.pats

nedit -import sisu_nedit.pats

status: a very clumsy first attempt [not really done]

comments: this editor features display line wrap

- emacs <<http://www.gnu.org/software/emacs/emacs.html>>

files: sisu-mode.el

2101

2102

2103

2104

2105

2106

2108

2109

2110

2111

2112

2113

2114

2115

2116

2117

2118

2119

2120

2121

2122

to file `~/.emacs` add the following 2 lines:

(add-to-list 'load-path "/usr/share/sisu-examples/config/syntax_hi")

(require 'sisu-mode.el)

[not done / not yet included]

- vim and gvim <<http://www.vim.org>>

files:

package is the most comprehensive sisu syntax highlighting and editor environment provided to date (is for vim/ gvim, and is separate from the contents of this directory)

status: this includes: syntax highlighting; vim folds; some error checking

comments: this editor features display line wrap

NOTE:

[**SiSU** parses files with long lines or line breaks, but, display linewrap (without line-breaks) is a convenient editor feature to have for sisu markup]

46. Help Sources

For a summary of alternative ways to get help on **SiSU** try one of the following:

man page

`man sisu_help`

man2html

<file:///usr/share/doc/sisu/html/sisu_help.1.html>

<http://www.jus.uio.no/sisu/man/sisu_help.1.html>

sisu generated output - links to html
